AROC v4 Data Dictionary for Clinicians - AU

Table of Contents

Data Element Name	Page Number
Are you the only rehabilitation care service collecting AROC data?	1
Will you see this patient more than once?	2
Are you the primary provider of rehabilitation care?	3
Is the person an inpatient?	4
Is the person receiving rehabilitation care?	5
Path	6
Establishment ID	7
Establishment Name	8
Ward ID / Team ID	9
Ward Name / Team Name	10
Person ID (MRN/NHI)	11
Letters of Name	12
Date of Birth	13
Date of Birth Estimate	14
Sex	15
Indigenous Status (AU)	16
Geographical Residence (AU)	17
Postcode	18
Funding Source (AU)	19
Health Fund/other payer	20
Need for interpreter service?	23
Referral Date	24
Assessment Date	25
Date clinically ready for rehabilitation care	26
Was there a delay in episode start?	27

Table of Contents

Data Element Name	Page Number
Reason for delay in episode start - Patient related issues (medical)	28
Reason for delay in episode start - Service issues	29
Reason for delay in episode start - External support issues	30
Reason for delay in episode start - Equipment issues	31
Reason for delay in episode start - Patient behavioural issues	32
Episode begin date	33
Type of Accommodation prior to this impairment (AU)	34
Carer status prior to this impairment	35
Were any services being received within the month prior to this impairment?	36
Service received prior to impairment - Domestic assistance	37
Service received prior to impairment - Social support	38
Service received prior to impairment - Nursing care	39
Service received prior to impairment - Allied health care	40
Service received prior to impairment - Personal care	41
Service received prior to impairment - Meals	42
Service received prior to impairment - Provision of goods & equipment	43
Service received prior to impairment - Transport services	44
Service received prior to impairment - Case management	45
Employment status prior to this impairment	46
Is this the first direct care rehabilitation episode for this impairment?	47
Date multi-disciplinary team rehabilitation plan established	49
Date of injury/impairment onset	50
Time since onset or acute exacerbation of chronic condition	51
Date of relevant acute episode	52
Mode of Episode Start - Ambulatory	53

Table of Contents

Data Element Name	Page Number
Mode of Episode Start - Inpatient	54
Were any services received during this ambulatory episode?	55
Service received during this ambulatory episode - Domestic assistance	56
Service received during this ambulatory episode - Social support	57
Service received during this ambulatory episode - Nursing care	58
Service received during this ambulatory episode - Allied health care	59
Service received during this ambulatory episode - Personal care	60
Service received during this ambulatory episode - Meals	61
Service received during this ambulatory episode - Provision of goods & equipment	62
Service received during this ambulatory episode - Transport services	63
Service received during this ambulatory episode - Case management	64
AROC Impairment Code	65
Type of accommodation during ambulatory episode	68
Carer status during ambulatory episode	69
Date episode start FIM assessed	70
Admission FIM score for eating	71
Admission FIM score for grooming	72
Admission FIM score for bathing	73
Admission FIM score for dressing upper body	74
Admission FIM score for dressing lower body	75
Admission FIM score for toileting	76
Admission FIM score for bladder management	77
Admission FIM score for bowel management	78
Admission FIM score for transfer to bed/chair/wheelchair	79

Table of Contents

Data Element Name	Page Number
Admission FIM score for transfer to toilet	80
Admission FIM score for transfer to shower/tub	81
Admission FIM score for locomotion	82
Admission FIM score for stairs	83
Admission FIM score for comprehension	84
Admission FIM score for expression	85
Admission FIM score for social interaction	86
Admission FIM score for problem solving	87
Admission FIM score for memory	88
Date episode start Lawton's Assessed	89
Score episode start Lawton's for telephone	90
Score episode start Lawton's for shopping	91
Score episode start Lawton's for food preparation	92
Score episode start Lawton's for housekeeping	93
Score episode start Lawton's for laundry excluding ironing	94
Score episode start Lawton's for mode of transportation	95
Score episode start Lawton's for responsibility for own medications	96
Score episode start Lawton's for ability to handle finances	97
Employment status after, or anticipated employment status after discharge	98
Date episode end FIM assessed	99
Discharge FIM score for eating	100
Discharge FIM score for grooming	101
Discharge FIM score for bathing	102
Discharge FIM score for dressing upper body	103
Discharge FIM score for dressing lower body	104

Table of Contents

Data Element Name	Page Number
Discharge FIM score for toileting	105
Discharge FIM score for bladder management	106
Discharge FIM score for bowel management	107
Discharge FIM score for transfer to bed/chair/wheelchair	108
Discharge FIM score for transfer to toilet	109
Discharge FIM score for transfer to shower/tub	110
Discharge FIM score for locomotion	111
Discharge FIM score for stairs	112
Discharge FIM score for comprehension	113
Discharge FIM score for expression	114
Discharge FIM score for social interaction	115
Discharge FIM score for problem solving	116
Discharge FIM score for memory	117
Date episode end Lawton's Assessed	118
Score episode end Lawton's for telephone	119
Score episode end Lawton's for shopping	120
Score episode end Lawton's for food preparation	121
Score episode end Lawton's for housekeeping	122
Score episode end Lawton's for laundry excluding ironing	123
Score episode end Lawton's for mode of transportation	124
Score episode end Lawton's for responsibility for own medications	125
Score episode end Lawton's for ability to handle finances	126
Date clinically ready for discharge	127
Was there a delay in discharge?	128
Reason for delay in discharge - Patient related issues (medical)	129

Table of Contents

Data Element Name	Page Number
Reason for delay in discharge - Service issues	130
Reason for delay in discharge - External support issues	131
Reason for delay in discharge - Equipment issues	132
Reason for delay in discharge - Patient behavioural issues	133
Is there an existing comorbidity interfering with this episode	134
Comorbidities Interfering with Rehabilitation Episode	135
Were there any complications interfering with this episode?	137
Complication interfering with this episode	138
Episode end date	139
Mode of episode end (Ambulatory)	140
Mode of episode end (Inpatient)	141
Interim destination (AU)	142
Final destination (AU)	143
Carer status post discharge	144
Total number of days seen	145
Total number of occasions of service	146
Staff type providing therapy during episode of care	147
Total number of leave days	148
Total number of suspension days	149
Total number of suspension occurrences	151
Will any services be received post discharge?	152
Service received post discharge - Domestic assistance	153
Service received post discharge - Social support	154
Service received post discharge - Nursing care	155
Service received post discharge - Allied health care	156

Table of Contents

Data Element Name	Page Number
Service received post discharge - Personal care	157
Service received post discharge - Meals	158
Service received post discharge - Provision of goods & equipment	159
Service received post discharge - Transport services	160
Service received post discharge - Case management	161
Will a discharge plan be available to patient prior to discharge?	162
Date patient emerged from PTA	163
Duration of PTA	164
ASIA score (AIS grade) at episode start	165
Level of spinal cord injury at episode start	166
Level of spinal cord injury at episode end	168
Ventilator dependent at episode end?	170
ASIA score (AIS grade) at episode end	171
Date ready for casting	172
Phase of amputee care at episode start	173
Phase of amputee care during episode - Delayed wound?	175
Phase of amputee care during episode - Pre prosthetic?	176
Phase of amputee care during episode - Prosthetic?	177
Phase of amputee care at episode end	178
Prosthetic device fitted?	180
Date of first prosthetic fitting	181
Reason for delay in first prosthetic fitting	182
Discharge timed up and go test	183
Discharge 6 minute walk test	184
Discharge 10 metre walk +/- aid test	185

Table of Contents

Data Element Name	Page Number
Rockwood Frailty Score (pre-morbid)	186
Was patient able to participation in therapy from day 1?	187
Has patient fallen in the last 12 months?	188
Has the patient lost > 10% of their body weight in the last 12 months?	189
General Comments	190

AROC v4 Databank Dictionary for Clinicians - AU

Data Element Name: Are you the only rehabilitation care service collecting AROC data?

Path: 1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☑

Path: 1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑

Definition:

Justification:

Guide for use:

Codeset Values:

1	Consult liaison/One off assessment
2	In-reach rehabilitation
3	Inpatient direct care
4	Ambulatory direct care
5	Ambulatory shared care
6	Ambulatory shared care/One off assessment

Data Element Name:	Establishment ID
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	A code which represents the facility.
Justification:	
Guide for use:	This would usually be the code issued by the Department of Health.

Codeset Values:

Data Element Name:	Establishment Name
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	The name of the facility collecting and submitting the data.
Justification:	
Guide for use:	
Codeset Values:	

Data Element Name:	Ward ID / Team ID
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	A 4 character alphanumeric code representing a ward or team.
Justification:	'Ward Identifier' and 'Ward Name' included for those facilities who have more than one ward and wish to: 1. Identify their data at ward/team level 2. Enable assignment of episodes of care to the appropriate ward/team.
Guide for use:	It is not manadatory to collect this data item if the facility has only one rehabilitation ward/team.

Codeset Values:

Data Element Name:	Ward Name / Team Name
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	The name of a ward or team within a facility.
Justification:	'Ward Identifier' and 'Ward Name' included for those facilities who have more than one ward and wish to: 1. Identify their data at ward/team level 2. Enable assignment of episodes of care to the appropriate ward/team.
Guide for use:	It is not manadatory to collect this data item if the facility only has one rehabilitation ward/team.

Codeset Values:

Data Element Name:	Person ID (MRN/NHI)
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Unique person identifier established by the facility.
Justification:	
Guide for use:	This is usually the Medical Record Number (MRN) in Australia or National Health Index (NHI) in NZ which is assigned by the hospital/facility.

Codeset Values:

Data Element Name:	Letters of Name
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Letters of name is a 5 letter word made up of the 2nd, 3rd and 5th letters of the patient's surname, followed by the 2nd and 3rd letters of the patient's first name.
Justification:	This information forms part of the statistical key (SLK) used by AROC to link patient's episodes through their rehabilitation journey.
Guide for use:	In the first three spaces record the 2nd, 3rd and 5th letters of the patient's surname. In the following two spaces, record the 2nd and 3rd letters of the patient's first name. For more information on SLK, please refer to the AROC website, V4 resources, SLK.

Codeset Values:

Data Element Name:	Date of Birth
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	The date of birth of the person being treated by the facility.
Justification:	Date of birth allows generation of age which is important for analysis. It also forms part of the Statistical Linkage Key (SLK) formula used by AROC to link patient's episodes through their rehabilitation journey.
Guide for use:	Enter in format DD/MM/YYYY. For more information on SLK, please refer to the AROC website, V4 resources, SLK.

Codeset Values:

Data Element Name:	Date of Birth Estimate
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Flag to indicate if Date of Birth item is a known or estimated value.
Justification:	Required as part of the Statistical Linkage Key (SLK) formula used by AROC to link patient's episodes through their rehabilitation journey.
Guide for use:	For more information on SLK, please refer to the AROC website, V4 resources, SLK.

Codeset Values:

1	Estimated
2	Not estimated

Data Element Name:	Sex
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	The biological differences between males and females, as represented by a code.
Justification:	Collected to allow analysis of outcomes by sex.
Guide for use:	

Codeset Values:

1	Male
2	Female
3	Indeterminate
9	Not stated/inadequately defined

Data Element Name:	Indigenous Status (AU)
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	In Australia, indigenous status is a measure of whether a patient identifies as being of Aboriginal or Torres Strait Islander origin. In NZ, indigenous status is a measure of whether a patient identifies as being of Maori or Non-Maori origin.
Justification:	Australia's Aboriginal and Torres Strait Islander peoples and New Zealand's Maori peoples occupy a unique place in respective societies and cultures. Accurate and consistent statistics about indigenous status are needed in order to plan, promote and deliver services. The purpose of this item is to provide information about people who identify as being of Aboriginal or Torres Strait Islander origin in Australia and Maori or non-Maori in New Zealand.

Guide for use:

Codeset Values:

1	Aboriginal but not Torres Strait Islander origin
2	Torres Strait Islander but not Aboriginal origin
3	Both Aboriginal and Torres Strait Islander origin
4	Neither Aboriginal nor Torres Strait Islander origin
9	Not stated / inadequately defined

Data Element Name:	Geographical Residence (AU)
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Geographical residence is the state (Australia) or region (NZ) that the patient usually resides in.
Justification:	This information may be used for identification of referral patterns and for analysis of outcomes by geographical area.
Guide for use:	Record the state (Australia) or region (NZ) that the patient usually resides in.

Codeset Values:

01	NSW
02	VIC
03	QLD
04	SA
05	WA
06	TAS
07	NT
08	ACT
09	Other Australian territory
10	Not Australia

Data Element Name:	Postcode
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Postcode is the numeric descriptor for a postal delivery area, aligned with locality, suburb or place for the address of patient. Record the postcode of the patient's usual place of residence.
Justification:	This information may be used for identification of referral patterns and for analysis of outcomes by area.
Guide for use:	Record the postcode of the patient's usual place of residence.Record 8888 for not applicable. Record 9999 for unknown.

Codeset Values:

Data Element Name:	Funding Source (AU)
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	The principal source of funding for the patient in rehabilitation.
Justification:	Collection of this data item enables AROC to further separate episodes based on who funded the care where the funding source is a health fund or other payer.
Guide for use:	If there is more than one contributor to the funding of the episode, please indicate the major funding source. If funding source = 2,4 or 5 then complete related data item D12, Health Fund/other payer.

Codeset Values:

01	Australian Health Care Agreements (public patient)
02	Private health insurance
03	Self-funded
04	Workers compensation
05	Motor vehicle third party personal claim
06	Other compensation (e.g. Public liability, common law, medical negligence)
07	Department of Veterans' Affairs
08	Department of Defence
09	Correctional facility
10	Other hospital or public authority (contracted care)
11	Reciprocal health care agreement (other countries)
98	Other
99	Not known

Data Element Name:	Health Fund/other payer
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Code corresponding to the person's private health fund, workers' compensation insurer or Compulsory Third Party (CTP) insurer as listed in Attachment below.
Justification:	Collection of this data item enables AROC to further separate episodes based on who funded the care.
Guide for use:	Only complete if "funding source" = 2 private health insurance, 4 workers' compensation or 5 motor vehicle third party personal claim.

Codeset Values:

001	ACA Health Benefits Fund
002	The Doctor's Health Fund Ltd

616	SGIC General Insurance
999	Unknown

Data Element Name:	Need for interpreter service?
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record whether an interpreter service (paid or unpaid e.g: family member) is required for the patient.
Justification:	Collection of this item will allow analysis of impact of a requirement for an interpreter on length of stay (LOS) and other outcomes.

Guide for use:

Codeset Values:

1	Interpreter needed
2	Interpreter not needed

Data Element Name:	Referral Date
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	The date that the rehabilitation team RECEIVED a referral for the patient.
Justification:	This item is being collected to measure the impact of delay between date referral RECEIVED and date rehabilitation started. Please note: Date referral RECEIVED is being collected and not date the referral was made, because at times these dates may differ and it was deemed unfair to include these extra days in the analysis. Under other circumstances, date referral RECEIVED and date referral made will be the same.
Guide for use:	Record the date the referral was RECEIVED. Referrals can be made by phone, fax or face to face across all settings. For example: An in-patient on the Intensive care ward was thought clinically ready for rehabilitation on 01/02/2012. A clinician on the intensive care ward calls the rehabilitation ward and makes a verbal referral the same day. Record 01/02/2012, the date the referral was received by the rehabilitation ward. An in-patient will require out-patient therapy once discharged. A referral was made after hours by fax on 01/02/2012, but only received by the outpatient service on 02/02/2012. Record 02/02/2012, the date the referral was received by the out-pt service. A patient was assessed in their home in rural Australia. He was deemed clinically ready for a boost of home based rehabilitation. A referral was faxed through to the local therapy team on 01/02/2012. The referral was received on 04/02/2012 when the part time staff returned to work. Record 04/02/2012, the date the referral was received.
Codeset Values:	

Data Element Name:	Assessment Date
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Assessment date is the date the patient was first seen by a clinician or the rehabilitation team to assess their appropriateness for rehabilitation care.
Justification:	This item is required to establish time periods between critical points through the rehabilitation episode.
Guide for use:	Current best practice for a clinician is to assess the patient via a face to face meeting with the patient (and/or their significant other), and staff currently looking after the patient, and to also undertake a review of clinical records. In some cases, geography or other issues may make a face to face assessment impractical, and in these cases a telephone assessment may be undertaken.

Codeset Values:

Data Element Name:	Date clinically ready for rehabilitation care
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	A patient is “clinically ready for rehabilitation” when the rehabilitation physician, or physician with an interest in rehabilitation, deems the patient ready to start their rehabilitation program and have documented this in the patient’s medical record. Record the date the patient is ready for rehabilitation and not the date rehabilitation actually started.
Justification:	This item is being collected to flag episodes that experienced a delay between being clinically ready for rehabilitation and rehabilitation actually starting.
Guide for use:	Record the date the patient is clinically ready for rehabilitation and not the date rehabilitation actually started.

Codeset Values:

Data Element Name:	Was there a delay in episode start?
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	This item identifies whether there was a delay between patient being assessed as appropriate for rehabilitation and the rehabilitation program starting.
Justification:	This item is being collected to flag episodes that experienced a delay in their rehabilitation start.
Guide for use:	Record 1,"Yes" if there was a delay and 2, "No" if there was not. If "Yes", complete the next 5 questions about reason(s) for delay in episode start.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in episode start - Patient related issues (medical)
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	This item collects information about patient related medical issues that have caused a delay between the patient being assessed as appropriate for rehabilitation and the rehabilitation program starting.
Justification:	This item is required to be able to identify the rehabilitation episodes whose rehabilitation start was delayed by patient related medical issues.
Guide for use:	Examples include: The patient is not medically stable; he was assessed as appropriate for rehabilitation, but can only be admitted once he has been afibril for 48 hours OR the patient requires further medical examination, investigation or tests, which cannot be provided on the rehabilitation unit. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in the episode start.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in episode start - Service issues
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	This item collects information about service issues that have caused a delay between the patient being assessed as appropriate for rehabilitation and the rehabilitation program starting.
Justification:	This item is required to be able to identify the rehabilitation episodes whose rehabilitation start was delayed by service issues.
Guide for use:	Examples include: There are no available rehabilitation beds, so patient remains on acute ward until a bed becomes available. There are no single rooms available for a patient requiring isolation e.g. patient has MRSA. Transport not available to transfer patient from acute hospital to rehabilitation unit 20 km away. Physician/surgeon in charge of patient's care has not agreed for patient's transfer. There are waiting lists for access to ambulatory programs. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in the episode start.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in episode start - External support issues
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	This item collects information about external support issues that have caused a delay between the patient being assessed as appropriate for rehabilitation and the rehabilitation program starting.
Justification:	This item is required to be able to identify the rehabilitation episodes whose rehabilitation start was delayed by external support issues.
Guide for use:	Examples include: Education about clinical needs of patient need to be completed prior to transfer to rehabilitation i.e: patient requires specialist wound management and staff on the rehabilitation unit need to receive this education before the patient can be transferred. Family delays admission to rehabilitation e.g. the recommended rehabilitation unit is further away from the family home than the acute service, so the family is reluctant to approve the transfer. Lack of availability of family or friend support e.g. a community based patient needs to stay with family or friend in the city in order to attend outpatient or community based therapy program. This family or friend is currently out of town. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in the episode start.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in episode start - Equipment issues
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	This item collects information about equipment issues that have caused a delay between the patient being assessed as appropriate for rehabilitation and the rehabilitation program starting.
Justification:	This item is required to be able to identify the rehabilitation episodes whose rehabilitation start was delayed by equipment issues.
Guide for use:	Examples include: Specialist equipment is not available and patient requires specialist bariatric equipment, which the ward needs to hire, prior to his admission. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in the episode start.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in episode start - Patient behavioural issues
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	This item collects information about patient behavioural issues that have caused a delay between the patient being assessed as appropriate for rehabilitation and the rehabilitation program starting.
Justification:	This item is required to be able to identify the rehabilitation episodes whose rehabilitation start was delayed by patient behavioural issues.
Guide for use:	Examples include: The patient is refusing to come to rehabilitation or the patient has challenging behaviours that can not be managed in the rehabilitation unit at this time. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in the episode start.

Codeset Values:

1	Yes
2	No

Data Element Name:	Episode begin date
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the date that the patient commenced rehabilitation care. This date defines the beginning of the rehabilitation episode and is the date from which length of stay (LOS) calculation begins. This is not dependant on geography or location of the patient. The begin date for an inpatient, direct, episode of care, is the date that the patient's care is transferred to a rehabilitation physician or physician with an interest in rehabilitation and it's recorded in the medical record that the rehabilitation team has commenced the rehabilitation program/ provision of care. It is the date that the "care type" becomes rehabilitation, no matter where the patient is geographically located. This date may be the same as the date the patient was admitted to hospital e.g. Patient admitted from home directly onto the rehabilitation unit OR a date during their hospital stay e.g. Date patient's care was transferred to a rehabilitation physician and rehabilitation commenced whilst the patient remained on the acute ward awaiting a rehabilitation bed. The begin date for an ambulatory, direct, episode of care, is the date that the patient's care is transferred to a rehabilitation physician or physician with an interest in rehabilitation and it's recorded in the medical record that the ambulatory rehabilitation team has commenced the rehabilitation program/ provision of care. The begin date for an episode of consultation liaison, is the date an in-patient, under another primary care provider (e.g. Acute care,) was seen by a member of the consult team (e.g. Rehabilitation team) and there is documented evidence in the medical record that the patient meets the criteria for rehabilitation. The begin date for an episode of shared care, is the date an ambulatory patient, who is receiving care from a clinical service provider (e.g. GP), was first seen by a member of another service provider (e.g. Rehabilitation team) and there is documented evidence in the medical record that the two services have agreed on a shared care arrangement that includes joint care planning and exchange of clinical information.
Justification:	This item is required to establish time periods between critical points through the rehabilitation episode.
Guide for use:	Record the date that the patient commenced rehabilitation care.
Codeset Values:	

Data Element Name:	Type of Accommodation prior to this impairment (AU)
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	The type of accommodation the patient lived in prior to the rehabilitation episode of care.
Justification:	Type of accommodation before and after rehabilitation are collected to reflect and compare where the patient has come from (what was their usual accommodation) and where they are going to (what will become their usual accommodation after discharge from rehabilitation). Comparison of accommodation pre and post rehabilitation is an indicator of rehabilitation outcome.
Guide for use:	Record the patient's accommodation type prior to their current episode of rehabilitation care. The patient's usual accommodation prior to rehabilitation will not necessarily be their usual accommodation after rehabilitation, e.g: the patient may have come from a private residence and be discharged to a nursing home.

Codeset Values:

1	Private residence (including unit in retirement village)
2	Residential aged care, low level care (hostel)
3	Residential aged care, high level care (nursing home)
4	Community group home
5	Boarding house
6	Transitional living unit
8	Other

Data Element Name:	Carer status prior to this impairment
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the level of carer support the patient received prior to their current inpatient or ambulatory admission. Include both paid and/or unpaid carer support received. Paid carer support includes both government funded and private health funded carers. Unpaid carer support include care provided by a relative, friend, partner of the patient.
Justification:	Carer status is a key outcome measure for rehabilitation. Carer status before and after rehabilitation can be compared as a indication of patient's rehabilitation outcomes.
Guide for use:	This is a data item that has changed from v3 dataset where it was known as "Level of Support Prior to this Impairment". V4 dataset records carer status prior and services received prior. Only complete if the patient's type of accommodation prior was private residence (including unit in retirement village), otherwise leave blank. Include both paid and unpaid carer support. Example of paid carer support: Mrs Jackson has a paid carer who comes to her home and assist her with personal care in the morning and the evening. Example of unpaid carer support: Mr Price's daughter completes his weekly grocery shop for him as he is no longer able to drive. Within the code set, "Co-dependent" is when the carer and a patient depend on each other for assistance with functional tasks. For example Mr Jones receives assistance from his wife to cut up his food and Mrs Jones receives assistance from her husband to remember to take her medication.

Codeset Values:

1	NO CARER and DOES NOT need one
2	NO CARER and needs one
3	CARER not living in
4	CARER living in, NOT co-dependent
5	CARER living in, co-dependent

Data Element Name:	Were any services being received within the month prior to this impairment?
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item identifies whether services were received by the person prior to this impairment. “Services” refers to paid or unpaid services received in the month prior to this impairment (or exacerbation of impairment.) Paid service(s) include both government funded and private health funded services. Unpaid service(s) include care provided by a relative, friend, partner of the patient. Discretionary services received by the patient, but not functionally necessary, should not be included e.g. A house cleaner because the patient doesn’t like cleaning rather than functionally can’t clean.
Justification:	Service(s) received relates to degree of functional independence of the person, and as increased functional independence is a key outcome measure for rehabilitation, it is important to ascertain the person's level of functional independence prior to rehabilitation. Service(s) received before and after rehabilitation can be compared as a indication of any change in the person's functional independence after rehabilitation.
Guide for use:	Only collect this data item if accommodation prior to this impairment was private residence (including unit in retirement village,) otherwise leave blank. Record 1,”Yes,” if service(s) were received and 2,”No,’ if no service(s) were received in the month prior to this impairment (or exacerbation of impairment)

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Domestic assistance
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with domestic tasks in the month prior to their impairment. Domestic tasks include: household cleaning, vacuuming, ironing, shopping, managing finances and meal preparation. Paid domestic assistance service(s) include both government funded and private health funded services. Unpaid domestic assistance service(s) are when domestic assistance is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid domestic assistance service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received assistance with domestic tasks and 2,"No,' if they did not receive assistance with domestic tasks (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Social support
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with social support in the month prior to their impairment. Social support includes: daily wellbeing through telephone calls, medication reminders, counselling etc. Paid social support service(s) include both government funded and private health funded services. Unpaid service(s) are when social support is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid social support service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received social support assistance and 2,"No,' if they did not receive social support assistance (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Nursing care
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid nursing care in the month prior to their impairment. Nursing care includes: nurse visiting a patient to administer wound care, medication, manage incontinence etc. Paid nursing care includes both government funded and private health funded services. Unpaid nursing care is when nursing care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid nursing care services within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received nursing care assistance and 2,"No,' if they did not receive nursing care assistance (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Allied health care
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid allied health care assistance in the month prior to their impairment. Allied health care includes: provision of physiotherapy, occupational therapy, speech and language therapy, recreational therapy, social work, psychology etc. Paid allied health care include both government funded and private health funded services. Unpaid allied health care is when allied health care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid allied health care service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received allied health care and 2,"No,' if they did not receive allied health care (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Personal care
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with personal care in the month prior to their impairment. Personal care includes: washing, dressing, grooming, eating, toileting etc. Paid personal care service(s) include both government funded and private health funded services. Unpaid personal care service(s) are when personal care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid personal care service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received assistance with personal care and 2,"No,' if they did not receive assistance with personal care (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Meals
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with meals in the month prior to their impairment. Meals include: ready meals like meals on wheels or lite and easy meals etc. Paid meal service(s) include both government funded and private health funded meal services. Unpaid service(s) are when meals are provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid meal service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received assistance with meals and 2,"No,' if they did not receive assistance with meals (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Provision of goods & equipment
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient was provided with paid or unpaid goods and equipment in the month prior to their impairment. Goods and equipment include: specialised equipment e.g. shower chair, commode, hoist, wheelchair OR smaller aids e.g. plate guard for eating, adapted cutlery, long handled sponge for washing etc. Paid goods and equipment include both government funded and private health funded goods and equipment. Unpaid goods and equipment include goods and equipment provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid good and equipment within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received good and equipment and 2,"No,' if they did not receive good and equipment (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Transport services
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with transport services in the month prior to their impairment. Transport services include: community transport for shopping or attending medical appointments, taxi vouchers, community bus and/ or use of patient transport assistance vehicle etc. Paid transport service(s) include both government funded and private health funded services. Unpaid service(s) are where transport is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid transport service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received assistance with transport services and 2,"No,' if they did not receive assistance with transport services (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received prior to impairment - Case management
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid case management in the moth prior to their impairment. Case management may be defined a service that provides assessment, planning, facilitation and advocacy for options and services to meet a patients needs. Paid case management includes both government funded and private health funded case management services. Unpaid case management includes case management provided by a relative, friend or partner.
Justification:	The type of service(s) received is a key outcome measure for rehabilitation. The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid case management services within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they received case management services and 2,"No,' if they did not receive case management services (paid or unpaid).

Codeset Values:

1	Yes
2	No

Data Element Name:	Employment status prior to this impairment
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item records the patient's employment status before they had their impairment (or exacerbation of impairment.)
Justification:	Employment is an important outcome that can be measured through the patient's rehabilitation journey. Employment status prior to this impairment is collected as a baseline measure and can be used to group patients into "similar" cohorts for analysis. Employed patients are flagged on admission and their employment status, or potential, is re-assessed at discharge, enabling a measure of change.
Guide for use:	Record the patient's employment status before they had their impairment (or exacerbation of impairment.) Within the codeset, Employment includes patients who performed work for wages or salary, in cash or in kind (including self employed and volunteers). It also includes patients temporarily absent from a paid employment, but who retained a formal attachment to that job, e.g. unpaid maternity leave. Umemployed includes patients who are without a job or out of work, usually involuntarily. Student/child includes patients who are enrolled, either full-time or part-time, in an accredited teaching institution providing instruction. Not in the labour force includes patients who have left the labour force e.g. retired by choice, mothers choosing to stay at home and care for children. Retired for age includes patients who have left the workforce due to their age and do not intend on recturning to paid work in any capacity. Retired for disability includes patients who have left the workforce due to a disability which is preventing them from working.

Codeset Values:

1	Employed
2	Unemployed
3	Student/child
4	Not in the labour force
5	Retired for age
6	Retired for disability

Data Element Name:	Is this the first direct care rehabilitation episode for this impairment?
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item relates to the patient's impairment and setting, not the particular facility. "Direct care" is when the patient is under the direct care of the rehabilitation physician or team, i.e. they hold medical governance over the patient. An episode of direct care can be provided in the inpatient rehabilitation setting or ambulatory rehabilitation setting (e.g. outpatient and/ or community). The first direct care rehabilitation episode for this impairment considers only those episodes occurring in this setting regardless of facility i.e. it aims to identify those patients that have repeated rehabilitation admissions/discharges within the one setting as subsequent episodes are typically quite different to primary episodes (NOTE: subsequent episodes caused by adhering to any required jurisdictional business rules will be concatenated into one primary episode as long as they occur within the same facility). Subsequent direct rehabilitation episodes of care are more common in certain impairments such as brain injury, spinal cord injury and/or amputee, where the patient often has multiple rehabilitation episodes across a variety of settings. NOTE: In the v3 dataset this item used to be called "first admission for this impairment" — while the v4 dataset data item has changed name the justification for its collection remains the same.
Justification:	This item attempts to differentiate the patient's first direct care rehabilitation episode (within a setting) from subsequent episodes through the patient's rehabilitation journey. It is important to accurately collect data about first direct care rehabilitation episode as data relating to first episode of care and subsequent episodes has an impact on outcome benchmarks.
Guide for use:	INPATIENT ONLY: A patient who had a Stroke, has an episode of acute care and is then transferred to an inpatient rehabilitation program. This is the first direct rehabilitation episode of care they have received for their stroke in the inpatient setting — record 1=Yes. INPATIENT FOLLOWING IN-REACH: A patient who has had a stroke, received in-reach rehabilitation prior to being admitted for inpatient rehabilitation. While the inpatient rehabilitation episode is NOT their first direct rehabilitation episode for this stroke, it is the first direct

rehabilitation episode of care in the inpatient rehabilitation setting — record 1=Yes.

INPATIENT FOLLOWING SUSPENSION: A patient receiving inpatient rehabilitation for reconditioning was admitted back to acute care for a period and has now returned to inpatient rehabilitation for the same condition as before. This inpatient rehabilitation episode is NOT their first direct rehabilitation episode for reconditioning in the inpatient rehabilitation setting — record 2=No.

INPATIENT FOLLOWING INPATIENT AT ANOTHER FACILITY: A patient admitted for inpatient rehabilitation for an amputation was admitted previously for an episode of direct inpatient rehabilitation care for this same impairment in a different hospital (i.e. the same setting) — record 2=No.

SPECIALIST INPATIENT FOLLOWING IN-REACH/GENERAL INPATIENT: A patient with a brain injury (or spinal cord injury) is transferred to a specialist brain injury unit (spinal cord injury unit) for inpatient rehabilitation having received rehabilitation elsewhere (e.g. in-reach rehabilitation on an acute ward or inpatient rehabilitation on a general rehabilitation ward while waiting specialist unit placement). While the inpatient rehabilitation episode is NOT their first direct rehabilitation episode for this impairment as a rehabilitation inpatient, it is the first direct rehabilitation episode of care in the specialist inpatient setting — record 1=Yes.

SPECIALIST INPATIENT FOLLOWING SPECIALIST INPATIENT: a patient with an acquired brain injury was admitted for a boost of inpatient rehabilitation care relating to the original brain injury for which they received their first direct episode of rehabilitation care on the inpatient brain injury ward 12 months prior. This is not the first direct rehabilitation episode of care in the specialist inpatient setting for this impairment — record 2=No.

Codeset Values:

1	Yes
2	No

Data Element Name:	Date multi-disciplinary team rehabilitation plan established
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	A multidisciplinary team rehabilitation plan comprises a series of documented and agreed initiatives/treatment (specifying program goals and time frames), which has been established through multi-disciplinary consultation and consultation with the patient. Record the date the multidisciplinary team rehabilitation plan was first recorded.
Justification:	The establishment of a multidisciplinary team rehabilitation plan with regular review is necessary for effective patient rehabilitation. This item is required for collection and calculation of the version 4 ACHS Rehabilitation Medicine clinical indicators; reflects timely establishment of a multi-disciplinary team rehabilitation plan.
Guide for use:	Record the date the multidisciplinary team rehabilitation plan is formally documented in the patients' medical record. It must be a record of the plan formulated by the team on initial assessment of the patient. Often, the initial case conference document is a formal multidisciplinary plan for the patients care while participating in rehabilitation. In other cases, the patient may be assessed by a multidisciplinary team prior to commencing a rehabilitation program, and the plan formulated from this assessment may form the multidisciplinary rehabilitation plan.
Codeset Values:	

Data Element Name: Date of injury/impairment onset

Path: 1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐

Definition: Record the date of the injury or impairment that has directly driven the need for the current episode of rehabilitation. For example, date the patient fractured their hip, or the date the patient had a stroke, or the date the patient had a limb amputated.

Justification: This item is being collected to be able to measure the time between injury/event and admission to rehabilitation, and analyse this against outcomes achieved.

Guide for use: This data element is one of a data pair. It is only collected if the exact date of injury/impairment is known. If the exact date is unknown, leave blank and record data item “time since onset or acute exacerbation of a chronic condition” instead. Do not record both items within this data pair.

Codeset Values:

Data Element Name:	Time since onset or acute exacerbation of chronic condition
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	The time that has elapsed since the onset of the patient's condition that is the reason for this episode of rehabilitation care.
Justification:	It is thought that the time between the onset of the impairment (or exacerbation) and admission to a rehabilitation program affects FIM improvement, and the patient's length of stay in the hospital. This AROC item provides data which may help support this theory.
Guide for use:	This data element is one of a data pair and is only collected if the exact date of injury/impairment is not known or the reason for rehabilitation is not related to an acute injury/ impairment. Record this data item OR date of injury/impairment, NOT both. In some cases, the impairment that has driven the need for rehabilitation may be a chronic disease with an insidious onset, and in these cases, record when the impairment started affecting the patient's function. For example, a patient admitted for rehabilitation for arthritis – no relevant acute admission – where the arthritis flared up 6 months ago and started affecting the patient's functioning, record codeset"6 months to less than 1 year".

Codeset Values:

1	less than 1 month
2	1 month to less than 3 months
3	3 months to less than 6 months
4	6 months to less than 1 year
5	1 year to less than 2 years
6	2 years to less than 5 years
7	5 years or greater
9	Unknown

Data Element Name:	Date of relevant acute episode
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the date of the acute admission relevant to the current episode of rehabilitation.
Justification:	This item is being collected to enable calculation of the time between acute admission and rehabilitation start dates, and analysed against outcomes achieved.
Guide for use:	Only collect this data item if the current episode for rehabilitation care was preceded by an episode of acute care, in the previous three months, relevant to the current rehabilitation episode. For example, Patient falls, fractures their hip and is admitted to an acute hospital on 01/02/2012. Once medically stable, the patient is transferred to the rehabilitation ward. Record 01/02/2012, the date of the relevant acute admission for this impairment. A patient may have required multiple hospital admissions for the one acute condition, such as a recurrent subdural haematoma bleed, or an infection post knee or hip replacement. In such cases, record the date of acute admission immediately post impairment. At times, this date may be the same as Date of Injury/impairment onset.
Codeset Values:	

Data Element Name:	Mode of Episode Start - Ambulatory
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item records data about where the patient came from when the ambulatory rehabilitation episode started.
Justification:	This data items defines how the patient commenced their ambulatory rehabilitation journey. Different entry points may affect a patient's progress.
Guide for use:	Patients in the community can be referred for ambulatory rehabilitation by their GP, therapist or specialist rooms. Others may be transferredfrom the hospital setting directly into an ambulatory rehabilitation program of care.

Codeset Values:

1	Referred by General Practitioner
2	Referred by Therapist
3	Referred direct from Rehabilitation Specialist Rooms (may use this codeset if referred from other Specialist e.g. Orthopaedic)
4	Transferred from Emergency Department
5	Transferred from acute specialist unit
6	Transferred from Acute Inpatient Care, same hospital
7	Transferred from Acute Inpatient Care, different hospital
8	Transferred from Sub-Acute inpatient care, same hospital
9	Transferred from Sub-Acute inpatient care, different hospital

Data Element Name:	Mode of Episode Start - Inpatient
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	This item records data about where the patient came from when the in-patient rehabilitation episode started.
Justification:	This data items defines how the patient commenced their in-patient rehabilitation journey. Different entry points may affect a patient's progress.
Guide for use:	Patient can be admitted from the community, either directly from their home (usual accommodation; could be private residence or a nursing home), or from somewhere other than their usual accommodation (staying with friends). Other major option is that person is admitted from a hospital setting. Within the code set, "Usual accommodation" may be defined as the patient's regular fixed abode e.g. their own home/rented residence or residential care home. "Other than usual accommodation" may be defined as temporary accommodation e.g. patient was away on holiday or business or visiting family and friends when he suffered his injury and was admitted to hospital. "Acute specialist unit" may be defined as a medical unit resourced with highly trained and experienced staff in the management of a specific diagnosis or impairment. The unit will also be resourced with any specialist equipment required. For e.g. ICU (intensive care unit) has nurses trained in critical care and life support equipment. An acute stroke unit has a multi-disciplinary team of clinicians highly experienced and trained in stroke management and resourced with equipment to provide specialist stroke care.

Codeset Values:

1	Admitted from usual accommodation
2	Admitted from other than usual accommodation
3	Transferred from another hospital
4	Transferred from acute care in another ward
5	Transferred from acute specialist unit
6	Change from acute care to sub/non acute care same ward
7	Change of sub/non acute care type
8	Other
9	Recommenced rehabilitation episode following suspension

Data Element Name:	Were any services received during this ambulatory episode?
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item identifies whether services were received during the ambulatory episode. “Services” refer to paid or unpaid services provided in addition to those services provided as part of the planned rehabilitation program. Paid service(s) include both government funded and private health funded services. Unpaid service(s) include care provided by a relative, friend, partner of the patient. Discretionary services received by the patient, but not functionally necessary, should not be included e.g. a house cleaner because the patient doesn’t like cleaning rather than functionally can’t clean.
Justification:	Service(s) received relates to degree of functional independence of the person, and as increased functional independence is a key outcome measure for rehabilitation, it is important to ascertain the person's level of functional independence prior to rehabilitation. Service(s) received before and after rehabilitation can be compared as a indication of any change in the person's functional independence after rehabilitation.
Guide for use:	Record 1,”Yes,” if service(s) were received and 2,”No,’ if no service(s) were received during the ambulatory rehabilitation episode

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Domestic assistance
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with domestic tasks during this ambulatory episode. Domestic tasks include: household cleaning, vacuuming, ironing, shopping, managing finances and meal preparation. Paid domestic assistance service(s) include both government funded and private health funded services. Unpaid domestic assistance service(s) are when domestic assistance is provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid domestic assistance service(s) during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received assistance with domestic tasks and 2,"No,' if they did not receive assistance with domestic tasks (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Social support
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with social support during this ambulatory episode. Social support includes: daily wellbeing through telephone calls, medication reminders, counselling etc. Paid social support service(s) include both government funded and private health funded services. Unpaid service(s) are when social support is provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid social support service(s) during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received social support assistance and 2,"No,' if they did not receive social support assistance (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Nursing care
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid nursing care during this ambulatory episode. Nursing care includes: nurse visiting a patient to administer wound care, medication, manage incontinence etc. Paid nursing care includes both government funded and private health funded services. Unpaid nursing care is when nursing care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid nursing care services during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received nursing care assistance and 2,"No,' if they did not receive nursing care assistance (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Allied health care
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid allied health care assistance during this ambulatory episode. Allied health care includes: provision of physiotherapy, occupational therapy, speech and language therapy, recreational therapy, social work, psychology etc. Paid allied health care include both government funded and private health funded services. Unpaid allied health care is when allied health care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid allied health care service(s) during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received allied health care and 2,"No,' if they did not receive allied health care (paid or unpaid) during this ambulatory episode.

Codeset Values:

2	No

Data Element Name:	Service received during this ambulatory episode - Personal care
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with personal care during this ambulatory episode. Personal care includes: washing, dressing, grooming, eating, toileting etc. Paid personal care service(s) include both government funded and private health funded services. Unpaid personal care service(s) are when personal care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid personal care service(s) during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received assistance with personal care and 2,"No,' if they did not receive assistance with personal care (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Meals
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with meals during this ambulatory episode. Meals include: ready meals like meals on wheels or lite and easy meals etc. Paid meal service(s) include both government funded and private health funded meal services. Unpaid service(s) are when meals are provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid meal service(s) during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received assistance with meals and 2,"No,' if they did not receive assistance with meals (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Provision of goods & equipment
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient was provided with paid or unpaid goods and equipment during this ambulatory episode. Goods and equipment include: specialised equipment e.g. shower chair, commode, hoist, wheelchair OR smaller aids e.g. plate guard for eating, adapted cutlery, long handled sponge for washing etc. Paid goods and equipment include both government funded and private health funded goods and equipment. Unpaid goods and equipment include goods and equipment provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid good and equipment during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received good and equipment and 2,"No,' if they did not receive good and equipment (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Transport services
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid assistance with transport services during this ambulatory episode. Transport services include: community transport for shopping or attending medical appointments, taxi vouchers, community bus and/ or use of patient transport assistance vehicle etc. Paid transport service(s) include both government funded and private health funded services. Unpaid service(s) are where transport is provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid transport service(s) during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received assistance with transport services and 2,"No,' if they did not receive assistance with transport services (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received during this ambulatory episode - Case management
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient received paid or unpaid case management during this ambulatory episode. Case management may be defined a service that provides assessment, planning, facilitation and advocacy for options and services to meet a patients needs. Paid case management includes both government funded and private health funded case management services. Unpaid case management includes case management provided by a relative, friend or partner.
Justification:	The type of service(s) received before, during and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient received any paid or unpaid case management services during this ambulatory episode, otherwise leave blank. Record 1,"Yes," if they received case management services and 2,"No,' if they did not receive case management services (paid or unpaid) during this ambulatory episode.

Codeset Values:

1	Yes
2	No

Data Element Name:	AROC Impairment Code
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	The AROC Impairment codes are used to classify rehabilitation epsiodes into like clinical groups. The Australian codes are based on the Uniform Data System for Medical Rehabilitation (UDSMR) codes. The selected code should reflect the primary reason for the current episode of rehabilitation care.
Justification:	Classification into like clinical groups provides a basis for analysing outcomes for clinically homogenous types of patient rehabilitation episodes.
Guide for use:	Refer to the AROC Impairment Codes Coding Guidelines attached, which were developed to assist in correctly classifying rehabilitation episodes according to impairment groups. Please note: 1. The episode should be classified according to the primary reason for the current episode of rehabilitation care. 2. Rehabilitation program names related to funding are not necessarily the same as the impairment group names.

Codeset Values:

1.11	Stroke, Haemorrhagic, Left Body Involvement (Right Brain)
1.12	Stroke, Haemorrhagic, Right Body Involvement (Left Brain)
1.13	Stroke, Haemorrhagic, Bilateral Involvement
1.14	Stroke, Haemorrhagic, No Paresis
1.19	Other haemorrhagic stroke
1.21	Stroke, Ischaemic, Left Body Involvement (Right Brain)
1.22	Stroke, Ischaemic, Right Body Involvement (Left Brain)
1.23	Stroke, Ischaemic, Bilateral Involvement
1.24	Stroke, Ischaemic, No Paresis
1.29	Other ischaemic stroke

4.1211	Spinal Cord Dysfunction, Non-traumatic, Quadriplegia incomplete C1-4
4.1212	Spinal Cord Dysfunction, Non-traumatic, Quadriplegia incomplete C5-8
4.1221	Spinal Cord Dysfunction, Non-traumatic, Quadriplegia complete C1-4
4.1222	Spinal Cord Dysfunction, Non-traumatic, Quadriplegia complete C5-8
4.13	Other non-traumatic spinal cord dysfunction
4.211	Spinal Cord Dysfunction, Traumatic, Paraplegia, incomplete
4.212	Spinal Cord Dysfunction, Traumatic, Paraplegia, complete
4.2211	Spinal Cord Dysfunction, Traumatic, Quadriplegia incomplete C1-4
4.2212	Spinal Cord Dysfunction, Traumatic, Quadriplegia incomplete C5-8
4.2221	Spinal Cord Dysfunction, Traumatic, Quadriplegia complete C1-4
4.2222	Spinal Cord Dysfunction, Traumatic, Quadriplegia complete C5-8
4.23	Other traumatic spinal cord dysfunction
5.11	Amputation of Limb, Non traumatic, Single upper amputation above the elbow
5.12	Amputation of Limb, Non traumatic, Single upper amputation below the elbow
5.13	Amputation of Limb, Non traumatic, Single lower amputation above the knee
5.14	Amputation of Limb, Non traumatic, Single lower amputation below the knee
5.15	Amputation of Limb, Non traumatic, Double lower amputation above the knee
5.16	Amputation of Limb, Non traumatic, Double lower amputation above/below the knee
5.17	Amputation of Limb, Non traumatic, Double lower amputation below the knee
5.18	Amputation of Limb, Non traumatic, Partial foot amputation (includes single/double)
5.19	Other non-traumatic amputation
5.21	Amputation of Limb, Traumatic, Single upper amputation above the elbow
5.22	Amputation of Limb, Traumatic, Single upper amputation below the elbow
5.23	Amputation of Limb, Traumatic, Single lower amputation above the knee
5.24	Amputation of Limb, Traumatic, Single lower amputation below the knee
5.25	Amputation of Limb, Traumatic, Double lower amputation above the knee
5.26	Amputation of Limb, Traumatic, Double lower amputation above/below the knee
5.27	Amputation of Limb, Traumatic, Double lower amputation below the knee
5.28	Amputation of Limb, Traumatic, Partial foot amputation (includes single/double)
5.29	Other traumatic amputation
6.1	Arthritis, Rheumatoid arthritis
6.2	Arthritis, Osteoarthritis
6.9	Other arthritis
7.1	Pain, Neck pain
7.2	Pain, Back pain
7.3	Pain, Extremity pain
7.4	Pain, Headache (includes migraine)

7.5	Pain, Multi-site pain
7.9	Other pain
8.111	Orthopaedic Conditions, Fracture of hip, unilateral (includes #NOF)
8.112	Orthopaedic Conditions, Fracture of hip, bilateral (includes #NOF)
8.12	Orthopaedic Conditions, Fracture of shaft of femur (excludes femur involving knee joint)
8.13	Orthopaedic Conditions, Fracture of pelvis
8.141	Orthopaedic Conditions, Fracture of knee (includes patella, femur involving knee joint, tibia or fibula involving knee joint)
8.142	Orthopaedic Conditions, Fracture of leg, ankle, foot
8.15	Orthopaedic Conditions, Fracture of upper limb (includes hand, fingers, wrist, forearm, arm, shoulder)
8.16	Orthopaedic Conditions, Fracture of spine (excludes where the major disorder is pain)
8.17	Orthopaedic Conditions, Fracture of multiple sites
8.19	Other orthopaedic fracture
8.211	Post orthopaedic surgery, Unilateral hip replacement
8.212	Post orthopaedic surgery, Bilateral hip replacement
8.221	Post orthopaedic surgery, Unilateral knee replacement
8.222	Post orthopaedic surgery, Bilateral knee replacement
8.231	Post orthopaedic surgery, Knee and hip replacement same side
8.232	Post orthopaedic surgery, Knee and hip replacement different sides
8.24	Post orthopaedic surgery, Shoulder replacement or repair
8.25	Post orthopaedic surgery, Post spinal surgery
8.26	Other orthopaedic surgery
8.3	Soft tissue injury
9.1	Cardiac, Following recent onset of new cardiac impairment
9.2	Cardiac, Chronic cardiac insufficiency
9.3	Cardiac, Heart or heart/lung transplant
10.1	Pulmonary, Chronic obstructive pulmonary disease
10.2	Pulmonary, Lung transplant
10.9	Other pulmonary
11	Burns
12.1	Congenital Deformities, Spina bifida
12.9	Other congenital
13.1	Other Disabling Impairments, Lymphoedema
13.3	Other Disabling Impairments, Conversion disorder
13.9	Other disabling impairments. This classification should rarely be used.
14.1	Major Multiple Trauma, Brain + spinal cord injury
14.2	Major Multiple Trauma, Brain + multiple fracture/amputation
14.3	Major Multiple Trauma, Spinal cord + multiple fracture/ amputation
14.9	Other multiple trauma
15.1	Developmental disabilities
16.1	Re-conditioning following surgery
16.2	Re-conditioning following medical illness
16.3	Cancer rehabilitation

Data Element Name:	Type of accommodation during ambulatory episode
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the type of accommodation in which the patient resides during this episode of ambulatory rehabilitation
Justification:	The type of accommodation before, during and after rehabilitation treatment are collected to reflect and compare where the patient has come from (what was their usual accommodation) and where they are going to end up (what will become their usual accommodation). Comparison of accommodation pre, during and post rehabilitation treatment is an indicator of rehabilitation outcomes
Guide for use:	If the patient is residing in a “private residence” during this ambulatory episode of care, only answer 1, “pre-impairment accommodation (same address),” if the addresses before and during the rehabilitation episode are the same. E.g: Mrs Bee lived at 13 Mornington Cresent before and during this ambulatory episode of care. If the patient is residing in a “private residence” during this ambulatory episode of care, but the address is different to their usual accommodation, specify the reason for the change of address ie: 2, interim accommodation due to geographical (access) issues, 3, Interim accommodation due to increased support required or 4, other. Within the code set, Interim accommodation, due to geographical (access) issues (may be private residence, hostel or Nursing Home) relates to patients who may be required to stay with friends and/or family in order to get to the ambulatory rehabilitation service. This would include patients who come from remote or isolated communities, or patients where specialist rehabilitation services are not provided locally. Interim accommodation, due to increased support required (may be private residence, hostel or Nursing Home) relates to patients who require increased assistance with ADL's (including transport,) as well as those who cannot stay at their usual address because their homes need modifications or because of their decreased functional ability post impairment E.g: External or internal stairs, inaccessible amenities.

Codeset Values:

1	Pre impairment accommodation (i.e. same address as in Item 17)
2	Interim accommodation, due to geographical (access) issue (may be private residence, hostel or Nursing Home)
3	Interim accommodation, due to increased support required (may be private residence, hostel or Nursing Home)
4	Other

Data Element Name: Carer status during ambulatory episode

Path: 1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐

Definition: Record carer status (paid and unpaid) during the ambulatory episode of care. Paid carer support includes both government funded and private health funded carers. Unpaid carer support include care provided by a relative, friend, partner of the patient.

Justification: Carer status is a key outcome measure for rehabilitation. Carer status before, during and after rehabilitation can be compared as a indication of patient's rehabilitation progress

Guide for use: This data item was previously known as "Level of Support during ambulatory episode".
V4 dataset records carer status during and services received during the ambulatory episode of care.
Include both paid and unpaid carer support received during their rehabilitation episode of care.
Example of paid carer support: Mrs Jackson has a paid carer who comes to her home and assist her with personal care in the morning and the evening.
Example of unpaid carer support: Mr Price's daughter completes his weekly grocery shop for him as he is no longer able to drive.
Within the code set,
"Co-dependent" is when the carer and a patient depend on each other for assistance with functional tasks. For example Mr Jones receives assistance from his wife to cut up his food and Mrs Jones receives assistance from her husband to remember to take her medication.

Codeset Values:

1	NO CARER and DOES NOT need one
2	NO CARER and needs one
3	CARER not living in
4	CARER living in, NOT co-dependent
5	CARER living in, co-dependent

Data Element Name:	Date episode start FIM assessed
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the date that the patient's admission Functional Independence Measure (FIM™ instrument) scores were completed.
Justification:	This item is required for collection and calculation of the version 4 ACHS Rehabilitation Medicine clinical indicators. It reflects timely assessment of function on admission.
Guide for use:	Admission FIM scoring needs to be completed as soon as possible after admission to establish an appropriate baseline functional score. Assessment is complete when the last item of the FIM assessment is completed and the time stamp should be the date on which this occurs. Even if the recording of this date happens on a day subsequent to the day the last item of the FIM assessment was completed, the date recorded must be the date the last item of the FIM assessment was scored.

Codeset Values:

Data Element Name:	Admission FIM score for eating
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the patient's Functional Independence Measure (FIM™ instrument) score for eating, assessed at the time of admission.
Justification:	The Functional Independence Measure (FIM™ instrument) scores and the AROC Impairment codes are based on the Uniform Data System for Medical Rehabilitation (UDSMR); a minimum data set that includes a system for grouping rehabilitation episodes by impairment type and a rating scale to measure function, the FIM™ instrument. The FIM™ instrument is a basic indicator of severity of disability. The functional ability of a patient changes during rehabilitation and the FIM™ instrument is used to track those changes which are a key outcome measure of rehabilitation episodes. Thus AROC ICDS collects FIM scores at episode start and episode end.
Guide for use:	Admission FIM scoring needs to be completed as soon as possible after admission to establish an appropriate baseline functional score.

Codeset Values:

1	Total contact assistance
2	Maximal contact assistance
3	Moderate contact assistance
4	Minimal contact assistance

Justification:	The Functional Independence Measure (FIM™ instrument) scores and the AROC Impairment codes are based on the Uniform Data System for Medical Rehabilitation (UDSMR); a minimum data set that includes a system for grouping rehabilitation episodes by impairment type and a rating scale to measure function, the FIM™ instrument. The FIM™ instrument is a basic indicator of severity of disability. The functional ability of a patient changes during rehabilitation and the FIM™ instrument is used to track those changes which are a key outcome measure of rehabilitation episodes. Thus AROC ICDS collects FIM scores at episode start and episode end.
Guide for use:	Admission FIM scoring needs to be completed as soon as possible after admission to establish an appropriate baseline functional score.

Data Element Name:	Date episode start Lawton's Assessed
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the date on which the Lawton's assessment was scored at episode start (admission)
Justification:	This item reflects timely assessment of function on admission to ambulatory rehabilitation. It also enables groupings of ambulatory patients for benchmarking and outcome measurement.
Guide for use:	Record the date on which the Lawton's assessment was scored at episode start (admission)

Codeset Values:

Data Element Name:	Score episode start Lawton's for telephone
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for telephone on admission to ambulatory rehabilitation
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episode. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Cannot use telephone at all
2	Can answer telephone but cannot dial
3	Can dial a few well-known numbers. Includes dialling only numbers that can be speed dialled.
4	Can operates telephone on own initiative - looks up and dials numbers etc. Includes use of TTY machine if no other assistance required.

Data Element Name:	Score episode start Lawton's for shopping
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for shopping on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Completely unable to shop
2	Needs to be accompanied on any shopping trip
3	Can shop independently for small purchases
4	Can take care of all shopping needs independently

Data Element Name:	Score episode start Lawton's for food preparation
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for food preparation on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Needs to have meals prepared and served
2	Can heat and serve prepared meals, or can prepare meals but not does maintain adequate diet (see note below)
3	Can prepare adequate meals if supplied with ingredients
4	Can plan, prepare, serve adequate meals independently

Data Element Name:	Score episode start Lawton's for housekeeping
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for housekeeping on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Cannot participate in any housekeeping tasks
2	Can perform some light daily tasks but not at a level necessary to maintain an acceptable standards of cleanliness (see note below)
3	Can perform light daily tasks e.g. Dishwashing, dusting
4	Can maintain house independently

Data Element Name:	Score episode start Lawton's for laundry excluding ironing
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for laundry on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	All laundry must be done by others
2	Can launder small items - rinses socks, stockings etc Can launder small items - rinses socks, stockings etc
3	Can do personal laundry but needs help with heavier items such as bedding and towels. Can do personal laundry but needs help with heavier items such as bedding and towels
4	Can do personal laundry completely

Data Element Name:	Score episode start Lawton's for mode of transportation
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for mode of transport on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Requires manual assistance from more than 1 person or does not travel at all
2	Travel limited to taxi or automobile with assistance of one other person
3	Can travel on public transportation when assisted or accompanied by another
4	Can travel independently on public transportation or can drive own car. Includes arranging own travel via taxi but not otherwise using public transport.

Data Element Name:	Score episode start Lawton's for responsibility for own medications
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for responsibility for own medications on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Is not capable of dispensing own medication
2	Can take responsibility if medication is prepared in advance in separate dosages
3	Can take responsibility for taking medications in correct dosage at correct time

Data Element Name:	Score episode start Lawton's for ability to handle finances
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the Australian Modified Lawton's score for ability to handle finances on admission to ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Guide: Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Incapable of handling money
2	Can manage day-to-day purchases, but needs help with banking, major purchases etc
3	Can manage financial matters independently (budgets, writes cheques, pays rent, bills, goes to bank), collects and keeps track of income

Data Element Name:	Employment status after, or anticipated employment status after discharge
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the patient's employment status, or anticipated employment status, after discharge.
Justification:	Employment is an important outcome that can be measured through the patient's rehabilitation journey. If the patient was employed prior to this impairment, AROC is interested in knowing if their rehabilitation has enabled them to achieve a level of function that allows them to return to work or not. If they have, AROC is also interested in knowing to what level they are able to return to work. Collection of this data will enable analysis of employment outcome achievement. E.g. A patient was employed prior to admission and returned to their same or similar job, with reduced hours upon discharge may have different functional outcomes to a patient was employed prior to their admission, but is unable to work upon discharge.
Guide for use:	Only complete this item if the patient was employed prior to this impairment (or exacerbation of this impairment). Record the patient's employment status, or anticipated employment status, after discharge. This is a new item in the v4 dataset.

Codeset Values:

1	Same or similar job, same or similar hours
2	Same or similar job, reduced hours
3	Different job by choice
4	Different job due to reduced function
5	Not able to work
6	Chosen to retire
7	Too early to determine

Data Element Name:	Date episode end FIM assessed
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the date that the patient's discharge FIM scores were scored.
Justification:	This item is required for collection and calculation of the version 4 ACHS Rehabilitation Medicine clinical indicators. Collection time stamps assessment of function prior to patient episode end.
Guide for use:	Discharge FIM scoring needs to be completed before the patient is discharged from the rehabilitation program. The score should reflect the functional status of the patient at discharge. Assessment is complete when the last item of the FIM assessment is completed and the time stamp should be the date on which this occurs. Even if the recording of this date happens on a day subsequent to the day the last item of the FIM assessment was completed, the date recorded must be the date the last item of the FIM assessment was scored.

Codeset Values:

Data Element Name:	Discharge FIM score for eating
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the patient's Functional Independence Measure (FIM™ instrument) score for eating, assessed at the time of discharge.
Justification:	The Functional Independence Measure (FIM™ instrument) scores and the AROC Impairment codes are based on the Uniform Data System for Medical Rehabilitation (UDSMR); a minimum data set that includes a system for grouping rehabilitation episodes by impairment type and a rating scale to measure function, the FIM™ instrument. The FIM™ instrument is a basic indicator of severity of disability. The functional ability of a patient changes during rehabilitation and the FIM™ instrument is used to track those changes which are a key outcome measure of rehabilitation episodes. Thus AROC ICDS collects FIM scores at episode start and episode end.
Guide for use:	Discharge FIM scoring needs to be completed before the patient is discharged from the rehabilitation program. The score should reflect the functional status of the patient at discharge.

Codeset Values:

1	Total contact assistance
2	Maximal contact assistance
3	Moderate contact assistance
4	Minimal contact assistance
5	Supervision or setup
6	Modified independence
7	Complete independence

Data Element Name:	Discharge FIM score for grooming
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the patient's Functional Independence Measure (FIM™ instrument) score for grooming, assessed at the time of discharge.
Justification:	The Functional Independence Measure (FIM™ instrument) scores and the AROC Impairment codes are based on the Uniform Data System for Medical Rehabilitation (UDSMR); a minimum data set that includes a system for grouping rehabilitation episodes by impairment type and a rating scale to measure function, the FIM™ instrument. The FIM™ instrument is a basic indicator of severity of disability. The functional ability of a patient changes during rehabilitation and the FIM™ instrument is used to track those changes which are a key outcome measure of rehabilitation episodes. Data Element Name:	Discharge FIM score for transfer to toilet
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the patient's Functional Independence Measure (FIM™ instrument) score for transfer to toilet, assessed at the time of discharge.
Justification:	The Functional Independence Measure (FIM™ instrument) scores and the AROC Impairment codes are based on the Uniform Data System for Medical Rehabilitation (UDSMR); a minimum data set that includes a system for grouping rehabilitation episodes by impairment type and a rating scale to measure function, the FIM™ instrument. The FIM™ instrument is a basic indicator of severity of disability. The functional ability of a patient changes during rehabilitation and the FIM™ instrument is used to track those changes which are a key outcome measure of rehabilitation episodes. Thus AROC ICDS collects FIM scores at episode start and episode end.
Guide for use:	Discharge FIM scoring needs to be completed before the patient is discharged from the rehabilitation program. The score should reflect the functional status of the patient at discharge.

Codeset Values:

1	Total contact assistance
2	Maximal contact assistance
3	Moderate contact assistance
4	Minimal contact assistance
5	Supervision or setup
6	Modified independence
7	Complete independence

Data Element Name: Discharge FIM score for transfer to shower/tub

Path: 1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐

Data Element Name:	Date episode end Lawton's Assessed
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the date on which the Australian Modified Lawton's assessment was scored at episode end (discharge)
Justification:	This item reflects timely assessment of function upon discharge from ambulatory rehabilitation. It also enables groupings of ambulatory patients for benchmarking and outcome measurement.
Guide for use:	Record the date on which the Australian Modified Lawton's assessment was scored at episode end (discharge)

Codeset Values:

Data Element Name:	Score episode end Lawton's for telephone
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for telephone on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Cannot use telephone at all
2	Can answer telephone but cannot dial
3	Can dial a few well-known numbers. Includes dialling only numbers that can be speed dialled.
4	Can operates telephone on own initiative - looks up and dials numbers etc. Includes use of TTY machine if no other assistance required.

Data Element Name:	Score episode end Lawton's for shopping
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for shopping on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Completely unable to shop
2	Needs to be accompanied on any shopping trip
3	Can shop independently for small purchases
4	Can take care of all shopping needs independently

Data Element Name:	Score episode end Lawton's for food preparation
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for food preparation on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Needs to have meals prepared and served
2	Can heat and serve prepared meals, or can prepare meals but not does maintain adequate diet (see note below)
3	Can prepare adequate meals if supplied with ingredients
4	Can plan, prepare, serve adequate meals independently

Data Element Name:	Score episode end Lawton's for housekeeping
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for housekeeping on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Cannot participate in any housekeeping tasks
2	Can perform some light daily tasks but not at a level necessary to maintain an acceptable standards of cleanliness (see note below)
3	Can perform light daily tasks e.g. Dishwashing, dusting
4	Can maintain house independently

Data Element Name:	Score episode end Lawton's for laundry excluding ironing
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for laundry on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	All laundry must be done by others
2	Can launder small items - rinses socks, stockings etc Can launder small items - rinses socks, stockings etc
3	Can do personal laundry but needs help with heavier items such as bedding and towels. Can do personal laundry but needs help with heavier items such as bedding and towels
4	Can do personal laundry completely

Data Element Name:	Score episode end Lawton's for mode of transportation
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for mode of transportation on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Requires manual assistance from more than 1 person or does not travel at all
2	Travel limited to taxi or automobile with assistance of one other person
3	Can travel on public transportation when assisted or accompanied by another
4	Can travel independently on public transportation or can drive own car. Includes arranging own travel via taxi but not otherwise using public transport.

Data Element Name:	Score episode end Lawton's for responsibility for own medications
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for responsibility for own medications on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Is not capable of dispensing own medication
2	Can take responsibility if medication is prepared in advance in separate dosages
3	Can take responsibility for taking medications in correct dosage at correct time

Data Element Name:	Score episode end Lawton's for ability to handle finances
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the Australian Modified Lawton's score for ability to handle finances on discharge from ambulatory rehabilitation.
Justification:	The functional ability of a patient changes during rehabilitation and the Australian Modified Lawton's instrument is used to track those changes which are a key outcome measure of the ambulatory rehabilitation episodes. Thus AROC collects Lawton's scores at episode start and episode end.
Guide for use:	Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 2 or a 3). In rating an item that is irrelevant (for example, the person does not have a phone or has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation. When assessing issues such as whether diet is adequate or there are acceptable standards of cleanliness, take into account the person's social and cultural context. Rate based on what is adequate or acceptable in that context and not in your own

Codeset Values:

1	Incapable of handling money
2	Can manage day-to-day purchases, but needs help with banking, major purchases etc
3	Can manage financial matters independently (budgets, writes cheques, pays rent, bills, goes to bank), collects and keeps track of income

Data Element Name:	Date clinically ready for discharge
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	An inpatient is clinically ready for discharge when the treating multidisciplinary team determine that there are no further rehabilitation goals that require ongoing in-patient rehabilitation and any ongoing rehabilitation needs can be adequately met by services available outside the in-patient setting. An ambulatory patient is clinically ready for discharge when the treating multidisciplinary team determine that there are no further rehabilitation goals that require ongoing treatment or that any further goals will be addressed by another provider.
Justification:	Anecdotedly the date a patient is clinically ready for discharge is not always the same as the actual discharge date. At times, there are delays. This item is being collected to enable analysis of these two time points and the effect on outcomes especially length of stay (LOS)
Guide for use:	Record the date the patient was clinically ready for discharge from rehabilitation, not the date the patient was actually discharged. In some cases, these dates may vary due to a delay. Collection is mandatory if E114, Mode of Episode End= 1 or 2, otherwise completion is optional.
Codeset Values:	

Data Element Name:	Was there a delay in discharge?
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item identifies whether there was a delay in discharge
Justification:	This item is being collected to flag episodes that experienced a delay in their discharge
Guide for use:	Record 1,"Yes" if there was a delay and 2, "No" if there was not. If "Yes", complete the next 5 questions about reason(s) for delay in discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in discharge - Patient related issues (medical)
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about patient related medical issues that have caused a delay in discharge.
Justification:	This item is required to be able to identify the rehabilitation episodes whose rehabilitation start was delayed by patient related medical issues.
Guide for use:	Examples include: Patient becomes medically unstable just before discharge and remains in the hospital for medical treatment not available in the community e.g. patient develops an UTI and becomes confused or patient falls just prior to discharge. Patient suddenly requires an intervention that needs to be completed prior to returning home e.g. an additional x-ray or ultrasound. A non-weight bearing patient no longer requires inpatient rehabilitation and is unable to return to the community as no alternative care facility is available. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in discharge - Service issues
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about service issues that have caused a delay in discharge.
Justification:	This item is required to be able to identify the rehabilitation episodes whose discharge was delayed by service issues.
Guide for use:	Examples include: Patient requires residential care placement, but there are no available beds. Patient requires low level care placement (hostel) and there are no beds available. Transport not available to transfer patient from rehabilitation unit to discharge destination. Patient requires OT home visit to confirm safe access and internal environment before discharge, but there are no OT's available. Waiting specialist review prior to discharge e.g. patient requires specialist review of weight-bearing status. Waiting aged care assessment to access and sign off on level of care patient will require upon discharge. Patient requires service(s) to ensure safe discharge and the necessary services are not available e.g. carer unavailable, domiciliary nursing care unavailable. Patient requires ambulatory rehabilitation services, however there is a waiting list. The inpatient team feel that patient can not be discharged until ambulatory rehabilitation is confirmed. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in discharge - External support issues
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about external support issues that have caused a delay in discharge.
Justification:	This item is required to be able to identify the rehabilitation episodes whose discharge was delayed by external support issues.
Guide for use:	Examples include: Education to carer or family about clinical needs of patient need to be completed to ensure safe discharge and carer or family member not available until after set discharge date. Family delays discharge e.g. family thinks patient would benefit from further inpatient rehabilitation or medical team continue to negotiate with family regarding care they can provide or discharge destination. Lack of availability of family or friend to support patient upon discharge e.g. patient lives with family or friend and is unsafe to live alone. Family or friend will be out of town at time of discharge. Accommodation e.g. patient has no available accommodation to be discharge to, patient is homeless. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in discharge - Equipment issues
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about equipment issues that have caused a delay in discharge.
Justification:	This item is required to be able to identify the rehabilitation episodes whose discharge was delayed by equipment issues.
Guide for use:	Examples include: Major or minor home modifications required for safe discharge are not complete. Specialist equipment is not available at time of discharge e.g. wheelchair not available at the time of discharge. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Reason for delay in discharge - Patient behavioural issues
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about patient behavioural issues that have caused a delay in discharge.
Justification:	This item is required to be able to identify the rehabilitation episodes whose discharge was delayed by patient behavioural issues
Guide for use:	Examples include: The patient is refusing to be discharged. If you would like to provide additional information, please use the general comments section. Leave blank if you indicated that there was no delay in discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Is there an existing comorbidity interfering with this episode
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item identifies whether the patient had any other significant existing illness/impairment, not part of the principal presenting condition, which interfered with the process of rehabilitation.
Justification:	It is important to identify whether the patient had co morbidities, as investigation of such data may reflect a relationship between the presence of comorbidities, the rehabilitation outcome and length of stay.
Guide for use:	Only record 1, "YES" if the patient's rehabilitation program was affected by the comorbidity, otherwise answer 2, "No". The effect of the comorbidity should be apparent in the patient's medical record. For example, the patient required extensive medication management for diabetes and had variability in blood sugar levels during the admission that affected their ability to participate, the patient required a longer length of stay to accommodate fatigue after dialysis, or the patient had one or more epileptic fits that caused the patient to need extra time to recover and be able to participate at the same level prior to the fit. Do not leave blank. If a comorbidity is present and it has interfered with the patient's rehabilitation, it is highly likely a suspension of treatment may also have occurred and would need to be recorded.

Codeset Values:

1	Yes
2	No

Data Element Name:	Comorbidities Interfering with Rehabilitation Episode
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item identifies which comorbidities interfered with the rehabilitation episode.
Justification:	It is important to identify which comorbidities interfered with the rehabilitation episode, as investigation of such data may reflect a relationship between the comorbidity, the rehabilitation outcome and length of stay.
Guide for use:	Only record comorbidities that have interfered with the rehabilitation episode. Up to four comorbidities can be entered from the code list. Please carefully consider the use of the code '99 Other' as this contributes to non-specific data. If you find a trend in your patient group that is not covered by the codeset options please contact AROC. If a comorbidity is present and it has interfered with the patient's rehabilitation, it is highly likely a suspension of treatment may also have occurred and would need to be recorded.

23	Pressure ulcer, pre-existing
24	Visual impairment

99	Other

Data Element Name: Were there any complications interfering with this episode?

Path: 1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐

Definition: A complication may be defined as a disease or disorder concurrent with the principal impairment (or exacerbation of impairment), which prevents the patient from engaging at the anticipated intensity in their planned rehabilitation program.

Justification: It is important to identify whether the patient had any complications, as investigation of such data may reflect a relationship between the presence of complications, the rehabilitation outcome and length of stay.

Guide for use: Only record 1, "Yes" if the patient's complication prevented them from engaging at the anticipated intensity in their planned rehabilitation program, otherwise answer 2, "No". Report only those complications arising during the rehabilitation episode. For example, a spinal patient on bed rest developed a pressure ulcer which prevented him from engaging at the anticipated intensity in his planned rehabilitation program OR a patient developed a UTI, became confused and was unable to engage at the anticipated intensity in his planned rehabilitation program.
If a complication is present and it has interfered with the patient's rehabilitation, it is highly likely a suspension of treatment may also have occurred and would need to be recorded.

Codeset Values:

1	Yes
2	No

Data Element Name: Complication interfering with this episode

Path: 1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐

Definition: This item identifies which complication(s) prevented the patient from engaging at the anticipated intensity in their planned rehabilitation program.

Justification: It is important to identify which complications interfered with the rehabilitation episode, as investigation of such data may reflect a relationship between the complication, the rehabilitation outcome and length of stay.

Guide for use: Only record complications that prevented the patient from engaging at the anticipated intensity in their planned rehabilitation program.
Record up to four complications from the code list.
Please carefully consider the use of the code '99 Other' as this contributes to non-specific data. If you find a trend in your patient group that is not covered by the codeset options please contact AROC.
If a complication is present and it has prevented the patient from engaging at the anticipated intensity in their planned rehabilitation program., it is highly likely a suspension of treatment may also have occurred and would need to be recorded.

12	Faecal impaction
99	Other

Data Element Name:	Episode end date
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the date that the patient completes their rehabilitation episode. This date defines the end of the rehabilitation episode and is the date at which the length of stay (LOS) concludes. Inpatient rehabilitation episode ends when the patient is discharged from the rehabilitation unit and/or the care type is changed from rehabilitation to acute or some other form of sub-acute (maintenance/ palliative care) no matter where the patient is physically located (rehabilitation ward/ acute ward). Ambulatory rehabilitation ends when the patient is discharged from the ambulatory rehabilitation program and/or the care type is changed from rehabilitation to either acute or some other form of sub-acute (maintenance/ palliative care), either inpatient or ambulatory. The end date for a consultation liaison episode of rehabilitation is when the patient is discharged by the rehabilitation physician or team completing the one-off consultation, no matter where the patient is physically located (rehabilitation ward/ acute ward). A consultation begin and end date may be the same at times. The end date for an episode of shared care is the date the rehabilitation provider discharges the ambulatory patient from their service. At this point the ambulatory patient may or may not continue to receive care from their other clinical service provider that was involved in the shared care arrangement (e.g. GP).
Justification:	This item is required to establish time periods between critical points through the rehabilitation episode.
Guide for use:	Record the date that the patient completes their rehabilitation episode or when the patient does not come back for treatment (ambulatory), or when the patient is discharged at their own risk.
Codeset Values:	

Data Element Name:	Mode of episode end (Ambulatory)
Path:	1 ☐ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☐
Definition:	This item records data about where the patient went to at the end of their ambulatory rehabilitation episode.There are two broad categories reflecting where the patient can go: 1. Remain in the community 2. Return to the hospital system
Justification:	This data items defines how the patient ended their rehabilitation journey. Different exit points are indicative of a patient's progress in rehabilitation.
Guide for use:	Patient can be discharged and remain in the community, either directly to their final destination and what will be their home from now on (could be private residence or a nursing home), or to an interim destination. Other major option is that person is discharged back to a hospital setting. If patient is discharged to their final destination, provide final destination details under data item, "final destination." If patient is discharged to "an interim destination", provide details of interim destination under data item, "interim destination" and then if known, details of their final destination under data item, "final destination." Please carefully consider the use of the code 9, "Other and unspecified" as this contributes to non-specific data. If you find a trend in your patient group that is not covered by the codeset options please contact AROC.

Codeset Values:

1	Discharged to final accommodation
2	Discharged to interim destination
3	Death
4	Admitted to hospital as sub acute/non-acute inpatient
5	Admitted to hospital as acute inpatient
7	Change of care type within sub-acute/non-acute care
8	Discharge at own risk
9	Other and unspecified

Data Element Name:	Mode of episode end (Inpatient)
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	This item records data about where the patient went to at the end of their in-patient rehabilitation episode. There are two broad categories reflecting where the patient can go: 1. Back to the community 2. Remain in the hospital system. Where the patient has a care type change, pathway 2 patients care type change will be from acute care to sub-acute care while pathway 3 patients care type change will be from sub-acute care to acute care.
Justification:	This data items defines how the patient ended their rehabilitation journey. Different exit points are indicative of a patient's progress in rehabilitation.
Guide for use:	Patient can be discharged to the community, either directly to their final destination and what will be their home from now on (could be private residence or a nursing home), or to an interim destination. Where the patient has a care type change, pathway 2 patients care type change will be from acute care to sub-acute care while pathway 3 patients care type change will be from sub-acute care to acute care. Other major option is that person is discharged back to a hospital setting. If patient is discharged to their final destination, provide final destination details under data item, "final destination." If patient is discharged to "an interim destination", provide details of interim destination under data item, "interim destination" and then if known, details of their final destination under data item, "final destination." Please carefully consider the use of the code 9, "Other and unspecified" as this contributes to non-specific data. If you find a trend in your patient group that is not covered by the codeset options please contact AROC.

Codeset Values:

1	Discharged to final accommodation
2	Discharged to interim accommodation
3	Death
4	Discharged/transferred to another hospital
5	Care type change and transferred to a different ward
6	Care type change and remained on same ward
7	Change of care type within sub-acute/non-acute care
8	Discharge at own risk
9	Other and unspecified

Data Element Name:	Interim destination (AU)
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This and the next item collect the type of accommodation a patient is going to post discharge from rehabilitation. An interim destination may be defined as accommodation that is only intended to be temporary, which the rehabilitation team considers as a 'middle step' to a final destination.
Justification:	This data item allows the facility to capture the fact the patient is unable to be discharged to what is intended to be their final destination immediately after rehabilitation. Feedback from AROC members indicates that this scenario is quite common and may indicate complexity of the patients discharge, or the lack of equipment and/or services available to the patient.
Guide for use:	Interim accommodation acknowledges that the patient has not been able to return to the most ideal accommodation immediately post discharge, and that even though their rehabilitation is deemed complete, they still have one more step to complete before reaching their final destination. E.g: Mrs Jones was discharged to her local country hospital (as maintenance patient, interim accommodation) whilst awaiting approval for a care package to be set-up in her own home (final accommodation) OR Mr Major was discharged to his daughter's home (interim accommodation) whilst awaiting completion of home modifications to his own home (final accommodation). Only complete if recorded "discharged to interim destination" at mode of episode end. If final destination is known, complete data item "final destination" as well. Interim destination is about intentions, not time frames.

Codeset Values:

1	Private residence (including unit in retirement village)
2	Residential, low level care (hostel)
3	Residential, high level care (nursing home)
4	Community group home
5	Boarding house
6	Transitional living unit
7	Hospital
8	Other
9	Unknown

Data Element Name: Final destination (AU)

Path: 1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐

Definition: Final destination may be defined as the accommodation that a patient is discharged to that is the most appropriate long term accommodation for the patient.

Justification: Type of accommodation before, during and after rehabilitation treatment are collected to reflect and compare where the patient has come from (what was their usual accommodation) and where they are going to (what will become their usual accommodation). Comparison of accommodation pre and post rehabilitation is an indicator of rehabilitation outcome.

Guide for use: Only complete if recorded “discharged to final destination” or “discharged to interim destination” at mode of episode end. Please carefully consider the use of the code set value '9, Unknown' as this contributes to non-specific data.

Codeset Values:

1	Private residence (including unit in retirement village)
2	Residential, low level care (hostel)
3	Residential, high level care (nursing home)
4	Community group home
5	Boarding house
6	Transitional living unit
8	Other
9	Unknown

Data Element Name:	Carer status post discharge
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the level of carer support the patient receives post discharge from their inpatient or ambulatory rehabilitation episode of care. Include both paid and/or unpaid carers. Paid carer support includes both government funded and private health funded carers. Unpaid carer support include care provided by a relative, friend, partner of the patient.
Justification:	Carer status is a key outcome measure for rehabilitation. Carer status before and after rehabilitation can be compared as a indication of patient's rehabilitation outcomes.
Guide for use:	This is a data item that has changed from v3 dataset where it was known as "Level of Support Post Discharge". The V4 dataset records carer status and services recieved post discharge. Only record if "final destination" or "interim destination" was private residence (including unit in retirement village), otherwise leave blank. Include both paid and unpaid carer support. Example of paid carer support: Mrs Jackson will have a paid carer come to her home and assist her with personal care in the morning and the evenings post discharge. Example of unpaid carer support: Mr Price's daughter will complete his weekly grocery shop for him as he is no longer able to drive. Within the code set, "co-dependent" is when the carer and a patient depend on each other for assistance with functional tasks. For example Mr Jones will receive assistance from his wife to cut up his food and Mrs Jones will receive assistance from her husband to remember to take her medication.

Codeset Values:

1	NO CARER and DOES NOT need one
2	NO CARER and needs one
3	CARER not living in
4	CARER living in, NOT co-dependent
5	CARER living in, co-dependent

Data Element Name:	Total number of days seen
Path:	1 ☑ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the total number of days that service(s) were provided to the patient during their episode of care.
Justification:	This item enables an accurate count of the total number of ACTUAL days the patient received therapy during their rehabilitation episode of care, which may impact on patient outcomes. In the ambulatory setting, rehabilitation days are not necessarily continuous. A patient may attend therapy sessions 2 or 3 times a week for a number of weeks, thus the count of days between episode start and episode end may (and is usually) many more days than the count of ACTUAL number of days that services were provided to the patient.
Guide for use:	In the ambulatory setting, this should total all days that service(s) were provided to the patient. For example, if the patient participated in the rehabilitation program 2 x per week for 4 weeks, the total number of days seen would be 8. In the inpatient setting, this item is only collected for in-patients who are seen once for a one off assessment (consult liaison) e.g. when a 'second opinion', advice on a particular problem, a case review, a one-off assessment or therapy session is required. In such cases, the patient has been seen once, so you would record “total number of days seen” as 1.

Codeset Values:

Data Element Name:	Total number of occasions of service
Path:	1 ☑ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the total number of occasions of service to the patient. An occasion of service may be defined as “each time therapy is provided to the patient; one therapy provider may provide an occasion of service to one or many patients at the same time (individual vs. group therapy). A patient may receive a number of occasions of service on the same day (e.g: physiotherapy in the morning and speech pathology in the afternoon).
Justification:	This item is recorded to enable an accurate count of the number of occasions of service during the episode of care as number of occasions of services may impact on patient outcomes.
Guide for use:	In the ambulatory setting, this should be the total of all occasions of service(s) that were provided to the patient. For example, if the patient attended the rehabilitation centre 2 x a week for 4 weeks, and had physiotherapy and occupational therapy at each visit the total number of occasions of service would be 16. In the inpatient setting, this item is only collected for in-patients who are seen once for a one off assessment (consult liaison) e.g. when a 'second opinion', advice on a particular problem, a case review, a one-off assessment or therapy session is required. In such cases, the patient has been seen once, so you would record “occasions of service” as 1
Codeset Values:	

Data Element Name:	Staff type providing therapy during episode of care
Path:	1 ☑ 2 ☐ 3 ☐ 4 ☑ 5 ☑ 6 ☑
Definition:	Record the type(s) of health professional or other care provider who provided treatment to the patient during their rehabilitation episode of care, as represented by a code.
Justification:	This item is required to enable analysis of inputs (therapy type) and their impact on functional outcomes.
Guide for use:	Please indicate all types of therapy providers who provided treatment to the patient during this episode of care. Choose up to 10. Please indicate hydrotherapist as the staff type even if the hydrotherapy was provided by a physiotherapist. Similarly, please indicate exercise physiologist/remedial gymnast as the staff type even if the gym class is overseen by a physiotherapist.

Codeset Values:

01	Aboriginal Liaison Worker
02	Audiologist
03	Case Manager
04	Clinical Nurse Consultant
05	Clinical Nurse Specialist

24	Therapy Aide
25	Vocational Co-ordinator
98	Other

Data Element Name:	Total number of leave days
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Leave days are a temporary absence from hospital, with medical approval, for a period no greater than seven consecutive days.
Justification:	Recording of leave days allows for the exclusion of these days from AROC's calculation of length of stay.
Guide for use:	Enter number of leave days that occurred during the episode (if there were none enter 0). Example. Mrs Jones is nearing the end of her rehabilitation episode. It has been decided that Mrs Jones will go home for two days on trial leave, to see if she is able to cope. Mrs Jones copes quite well, returns to the hospital, finishes her rehabilitation program and is then discharged. Total leave days = 2. If there are a number of leave periods, calculate the total leave days by the sum of the length of leave (date returned from leave minus date went on leave) for all periods during the patients rehabilitation. Example: A month before his discharge, Mr Smith trialled an overnight stay at his own home. It was successful, so 2 nights week-end leave were arranged for the remaining 3 weeks of his rehabilitation episode. Total leave days = 1+2+2+2= 7 days
Codeset Values:	

Data Element Name:	Total number of suspension days
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	The sum of the number of days rehabilitation treatment was suspended for a medical reason during an episode of rehabilitation.
Justification:	Achievement of a patient's rehabilitation goals may be dependent upon the consistency of treatment. Any requirement to suspend rehabilitation treatment may significantly impact upon treatment outcomes and the efficiency with which these can be achieved. Collection of this data item will provide facilities with information that they can use to help explain their outcomes to interested parties.
Guide for use:	It is recognised that there may be a number of reasons for the suspension of a rehabilitation program: 1. A medical condition that prevents the patient participating in their rehabilitation program. For example, a flare up of asthma where the patient develops breathing problems and therefore cannot participate in their rehabilitation program for a period of time. During the period of suspension the patient may remain on the rehabilitation ward, or may need to be transferred to an acute ward for treatment. 2. The requirement for a medical procedure (eg. Gastroscopy, renal dialysis) that prevents the patient participating in their rehabilitation program for a period of time. The patient may need to be transferred to another facility for this procedure. 3. The requirement for the patient to attend a medical appointment that prevents the patient participating in their rehabilitation program for a period of time. Enter the number of days that the patient's treatment was suspended. If there were none enter '0'. Please note that where a patient participates in their rehabilitation program in the morning and then has, for example, their renal dialysis in the afternoon, this IS NOT a suspension of treatment, because the patient has participated in their program on that day. Please note that where a patient refuses to participate in their rehabilitation program for a period of time – this IS NOT considered a suspension of treatment. The General Rule is that where a patient's rehabilitation treatment is suspended for a period, and the patient then comes back onto the same program of rehabilitation (that is, a new program is not required to be developed) then the period of absence is counted as a suspension. It does not matter how long the period of suspension of treatment is, as long as the patient comes back onto the same program of rehabilitation.

Where a patient's rehabilitation treatment is suspended for a period, but on their return to rehabilitation it is necessary to develop a new rehabilitation program for them (due to a change in the patient's functional status, or to the objectives of the rehabilitation program) then the period of absence IS NOT counted as a suspension. Rather the patient should be discharged (from the date their rehabilitation treatment was suspended) and a new episode commenced (from the date they return to rehabilitation).
For example: Mrs Jones is admitted on Monday and commences treatment straight away. On Thursday her asthma flares up and she is unable to undertake her rehabilitation program on Thursday and Friday. She starts again on Saturday. Next Wednesday her asthma flares up again and she does not have rehabilitation treatment on Wednesday, but starts again on Thursday. Mrs Jones has had a total of 3 treatment suspension days.

Codeset Values:

Data Element Name:	Total number of suspension occurrences
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the total number of rehabilitation treatment suspension occurances during this admission.
Justification:	Achievement of a patient's rehabilitation goals may be dependent upon the consistency of treatment. The number of treatment suspensions occurrences as well as the total number of suspension days may significantly impact upon treatment outcomes and the efficiency with which these can be achieved. Collection of this data item will provide facilities with information that they can use to help explain their outcomes to interested parties.
Guide for use:	Enter number of periods of rehabilitation treatment suspensions that occurred during the episode. If there were none, enter 0. Example. Mrs Jones is admitted on Monday and commences treatment straight away. On Thursday her asthma flares up and she is unable to undertake her rehab program on Thursday and Friday. She starts again on Saturday. Next Wednesday her asthma flares up again and she does not have rehabilitation treatment on Wednesday, but starts again on Thursday. Mrs Jones has had 2 occurrences of treatment suspensions.
Codeset Values:	

Data Element Name:	Will any services be received post discharge?
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item identifies whether services were necessary post discharge. “Services” refers to paid or unpaid services required post discharge, that is: all services that have been discussed, agreed, planned and booked for the patient prior to discharge. Paid service(s) include both government funded and private health funded services. Unpaid service(s) include care provided by a relative, friend, and partner.
Justification:	Service(s) received relates to degree of functional independence of the person, and as increased functional independence is a key outcome measure for rehabilitation, it is important to ascertain the person's level of functional independence before and after rehabilitation. Service(s) received before and after rehabilitation can be compared as a indication of any change in the person's functional independence after rehabilitation.
Guide for use:	Only collect this data item if the patient’s final discharge destination was private residence (including unit in retirement village), otherwise leave blank. Record 1,”Yes,” if service(s) required and 2,”No,’ if no service(s) are required post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Domestic assistance
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid assistance with domestic tasks post discharge. Domestic tasks include: household cleaning, vacuuming, ironing, shopping, managing finances and meal preparation. Paid domestic assistance service(s) include both government funded and private health funded services. Unpaid domestic assistance service(s) are when domestic assistance is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid domestic assistance service(s) post discharge, otherwise leave blank. Record 1,"Yes," if they require assistance with domestic tasks and 2,"No,' if they did not require assistance with domestic tasks (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Social support
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid assistance with social support post discharge. Social support includes: daily wellbeing through telephone calls, medication reminders, counselling etc. Paid social support service(s) include both government funded and private health funded services. Unpaid service(s) are when social support is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid social support service(s) post discharge, otherwise leave blank. Record 1,"Yes," if they require social support assistance and 2,"No,' if they do not require social support assistance (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Nursing care
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid nursing care post discharge. Nursing care includes: nurse visiting a patient to administer wound care, medication, manage incontinence etc. Paid nursing care includes both government funded and private health funded services. Unpaid nursing care is when nursing care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid nursing care services post discharge, otherwise leave blank. Record 1,"Yes," if they require nursing care assistance and 2,"No,' if they did not require nursing care assistance (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Allied health care
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid allied health care assistance post discharge. Allied health care includes: provision of physiotherapy, occupational therapy, speech and language therapy, recreational therapy, social work, psychology etc. Paid allied health care include both government funded and private health funded services. Unpaid allied health care is when allied health care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid allied health care service(s) post discharge, otherwise leave blank. Record 1,"Yes," if they require allied health care and 2,"No,' if they did not require allied health care (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Personal care
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid assistance with personal care post discharge. Personal care includes: washing, dressing, grooming, eating, toileting etc. Paid personal care service(s) include both government funded and private health funded services. Unpaid personal care service(s) are when personal care is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid personal care service(s) post discharge, otherwise leave blank. Record 1,"Yes," if they require assistance with personal care and 2,"No,' if they did not require assistance with personal care (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Meals
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid assistance with meals post discharge. Meals include: ready meals like meals on wheels or lite and easy meals etc. Paid meal service(s) include both government funded and private health funded meal services. Unpaid service(s) are when meals are provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid meal service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they require assistance with meals and 2,"No,' if they did not require assistance with meals (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Provision of goods & equipment
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid goods and equipment post discharge. Goods and equipment include: specialised equipment e.g. shower chair, commode, hoist, wheelchair OR smaller aids e.g. plate guard for eating, adapted cutlery, long handled sponge for washing etc. Paid goods and equipment include both government funded and private health funded goods and equipment. Unpaid goods and equipment include goods and equipment provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires paid or unpaid good and equipment post discharge otherwise leave blank. Record 1,"Yes," if they require good and equipment and 2,"No,' if they did not require good and equipment (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Transport services
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid assistance with transport services post discharge. Transport services include: community transport for shopping or attending medical appointments, taxi vouchers, community bus and/ or use of patient transport assistance vehicle etc. Paid transport service(s) include both government funded and private health funded services. Unpaid service(s) are where transport is provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires any paid or unpaid transport service(s) within the month prior to this impairment, otherwise leave blank. Record 1,"Yes," if they require assistance with transport services and 2,"No,' if they did not require assistance with transport services (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Service received post discharge - Case management
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	This item collects information about whether the patient requires paid or unpaid case management post discharge. Case management may be defined a service that provides assessment, planning, facilitation and advocacy for options and services to meet a patients needs. Paid case management includes both government funded and private health funded case management services. Unpaid case management includes case management provided by a relative, friend or partner.
Justification:	The type of service(s) received before and after rehabilitation can be compared as an indication of patient's rehabilitation progress.
Guide for use:	Only collect this data item if the patient requires paid or unpaid case management services post discharge, otherwise leave blank. Record 1,"Yes," if they require case management services and 2,"No,' if they did not require case management services (paid or unpaid) post discharge.

Codeset Values:

1	Yes
2	No

Data Element Name:	Will a discharge plan be available to patient prior to discharge?
Path:	1 ☐ 2 ☐ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	A discharge plan is a formal document that summarises the episode of rehabilitation, and provides information about medications the patient was receiving on discharge, and follow-up care (such as doctor's appointments). This document may also be sent (or faxed) to the GP on discharge.
Justification:	This item is required for collection and calculation of the version 4 ACHS Rehabilitation Medicine clinical indicators; ensures discharge plan is established prior to patient separation.
Guide for use:	Answer 1, "Yes" if the patient is provided with a formal document that summarises the episode of rehabilitation, and provides information about medications the patient was receiving on discharge and follow-up care (such as doctors appointments). This document may also be sent (or faxed) to the GP on discharge, otherwise answer 2, "No"

Codeset Values:

1	Yes
2	No

Data Element Name:	Date patient emerged from PTA
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the date that the patient emerged from post traumatic amnesia (PTA).
Justification:	Duration of PTA data is collected to establish whether there is a relationship between PTA duration and length of stay (LOS) and/or FIM change. By recording the date patient emerged from PTA, we can calculate the number of days the patient was in PTA, group the cohort into severity and analyse whether there is a relationship between PTA duration and LOS and/or FIM change. It is hypothesised that a longer time in PTA leads to increased LOS and decreased FIM change.
Guide for use:	Collect for all TBI episodes (AROC impairments 2.21 and 2.22.) If "Date emerged from PTA is known, leave "Duration of PTA" blank. If "Date Emerged from PTA" is unknown, leave this item blank and complete "Duration of PTA" instead. PTA is measured using a PTA scale and represents a stage of recovery during which a patient's orientation and memory for ongoing events remains poor. There are different scales available and being used by different states. The most common scales include The Westmead PTA Scale, The Modified Oxford PTA Scale and the Julia Farr. A common question is: “When to cease testing?” Testing should cease at 6 months (183 days) and then class patient as “chronic amnesic” . Other circumstances to cease testing may include: patient becoming frustrated with testing, clinician getting the feeling that clinically the patient has emerged from PTA and neuropsychology assessment confirms this. What if patient emerged from PTA prior to being admitted to rehabilitation? Clinicians should try their utmost to get the date the patient emerged from PTA from referring hospital.
Codeset Values:	

Data Element Name:	Duration of PTA
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	The number of days a patient with a TBI was in post traumatic amnesia (PTA).
Justification:	Duration of PTA data is collected to establish whether there is a relationship between PTA duration and length of stay (LOS) and/or FIM change. By recording the number of days a patient is in PTA, we can calculate and group the cohort by severity of PTA and then analyse whether there is a relationship between PTA duration and LOS and/or FIM change. It is hypothesised that a longer duration of PTA leads to increased LOS and decreased FIM change.
Guide for use:	Collect for all TBI episodes (AROC impairments 2.21 and 2.22). Only collect if "Date emerged from PTA" is unknown. If "Date emerged from PTA" is known, leave blank. PTA is measured using a PTA scale and represents a stage of recovery during which a patient's orientation and memory for ongoing events remains poor. There are different scales available and being used by different states. The most common scales include the Westmead PTA Scale, The Modified Oxford PTA Scale and the Julia Farr. A common question is: "When to cease testing?" Testing should cease at 6 months (183 days) and then class patient as "chronic amnesic" (option 7 in codeset). Other circumstances to cease testing may include: patient becoming frustrated with testing, clinician getting the feeling that clinically the patient has emerged from PTA and neuropsychology assessment confirms this. In all circumstances, please indicate the number of days the patient was in PTA.

Codeset Values:

0	PTA not recorded
1	0 days (i.e. never in PTA)
2	1 day (i.e. couple of mins up to 24 hours)
3	2-7 days
4	8-28 days
5	29-90 days
6	91-182 days
7	183 days or more (chronic amnesic)
8	PTA unable to be recorded
9	In PTA at discharge

Data Element Name:	ASIA score (AIS grade) at episode start
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☐ 5 ☐ 6 ☐
Definition:	Record the patient's American Spinal Injury Association Impairment Scale (AIS) grade at the start of their rehabilitation episode.
Justification:	This item is required to enable analysis of change between AIS grade on admission and discharge from rehabilitation.
Guide for use:	Collect for AROC impairment code 4 only. Leave blank for all other AROC impairment codes. We acknowledge the National Injury Surveillance Unit (NISU) guidelines to complete the AIS grade 4 weeks post injury, however for the purposes of this data collection tool and the manner in which the data is to be utilized, please record the patient's AIS grade at the start of their inpatient rehabilitation episode. Recording of this item is not compulsory in the ambulatory dataset.

Codeset Values:

A	Complete. No sensory or motor function is preserved in the sacral segments S4-S5.
B	Sensory Incomplete. Sensory but not motor function is preserved below the neurological level and includes the sacral segments S4-S5, AND no motor function is preserved more than three levels below the motor level on either side of the body.
C	Motor Incomplete. Motor function is preserved below the neurological level, and more than half of key muscle functions below the single neurological level of injury have a muscle grade less than 3.
D	Motor Incomplete. Motor function is preserved below the neurological level, and at least half (half or more) of key muscle functions below the neurological level of injury have a muscle grade > 3.
E	Normal: Sensory and motor functions are normal

Data Element Name:	Level of spinal cord injury at episode start
Path:	1 ☐ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the level of spinal cord injury (SCI) at the start of their rehabilitation episode of care.
Justification:	This item is required to enable analysis of change between level of SCI at admission and discharge from rehabilitation.
Guide for use:	Collect for AROC impairment code 4 only. Leave blank for all other AROC impairment codes. If patient is cauda equina, record “cauda equina” in general comment field. If unable to establish level of injury, record “paraplegia” or “quadriplegia” in the general comments field.

Data Element Name:	Date ready for casting
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the date the treating rehabilitation physician or team deems the stump is ready for casting.
Justification:	This item is required to establish time periods between critical points through the rehabilitation episode.
Guide for use:	Collect for AROC impairment code 5 only. Leave blank for all other AROC impairment codes. If the date is known enter exact date. Use date format DD/MM/YYYY. If casting is planned but the date is not yet known enter 07/07/7777. If casting is not clinically appropriate enter 08/08/8888.

Codeset Values:

Data Element Name:	Phase of amputee care at episode start
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☐
Definition:	Record the phase of amputee care the patient is in at episode start (admission.)
Justification:	This item is required to be able to define the different paths through rehabilitation for amputees and to ensure benchmarking between like cohorts
Guide for use:	Collect for AROC impairment code 5 only. Leave blank for all other AROC impairment codes. Use the code set definitions to assist with defining of amputee phase of care at admission. Record 1 phase only. Within the codeset, Preoperative phase is the phase during which the clinical decision to perform amputation occurs, including assessment of urgency (following trauma or infection.) A comprehensive interdisciplinary baseline assessment of the patient's status including medical assessment, functional status (including function of contra lateral limb), pain control and psychological and cognitive assessment is completed. Patient's goals, social environment and support systems are all defined. A post-operative care plan should be determined by the surgeon and rehabilitation team to address medical, wound or surgical and rehabilitation requirements. Delayed wound phase is the phase where problems occur with wound healing and additional interventions are considered as needed, including revision surgery, vascular and infection evaluation, aggressive local wound care and hyperbaric oxygen. Pre prosthetic phase is the phase where a patient is discharged from acute care and enters in-patient rehabilitation program or is treated in ambulatory setting. Postoperative assessment to review patient's status, including physical and functional assessment; completion of FIM baseline and other relevant assessments are completed. Rehabilitation goals are determined, rehabilitation treatment plan is established and updated and patient education is provided. Provide physical and functional interventions based on current and potential function. Determine whether a prosthesis is appropriate to improve functional status and meet realistic patient goals. Prosthetic phase is the phase where functional goals of prosthetic fitting are determined. Prosthesis is prescirbed based on current or potential level of ambulation. Patient receives interim or permanent prosthetic fitting and training, and early rehabilitation management. Prosthetic gait training and patient education on functional use of prosthesis for transfers, balance and safety is provided. Follow-up phase is the phase where follow-up appointment after discharge from rehabilitation is scheduled. Assessment of patient's goals, functional assessment, secondary complications, prosthetic assessment

(repair, replacement, mechanical adjustment and new technology) and vocational and recreational needs are completed. Secondary amputation prevention is provided (where relevant). This also includes the provision of rehabilitation for patients who are not suitable for a prosthesis. Rehabilitation focus may include transfers, functional mobility, wheelchair mobility, ADL training.

Definition:	Record the time in completed seconds and complete assessment just before patient is discharged.
Justification:	This is a functional outcome measure. It is required to enable groupings of patients with similar levels of amputation and analysis of their outcomes. There are also population averages, which can serve as benchmarks.
Guide for use:	Collect for AROC impairment code 5 only. Leave blank for all other AROC impairment codes. Record time in COMPLETED seconds e.g: If patient takes 20.2 seconds to complete the 10 metre walk +/- aid test , record 20 seconds. If patient takes 20.8 seconds to complete 10 metre walk +/- aid test, record 20 seconds. If patient takes 1 minute 18 seconds, record 78 seconds. If the patient is unable to complete the test or the test is non applicable for this episode of care, code 9999.
Codeset Values:	

Data Element Name:	Rockwood Frailty Score (pre-morbid)
Path:	1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑
Definition:	Frailty may be defined as a condition, seen particularly in older patients, characterized by low functional reserve, easy tiring, decreased libido, mood disturbance, accelerated osteoporosis, decreased muscle strength, and high susceptibility to disease. Record the patient's level of frailty just before they had their injury (impairment) or exacerbation of impairment resulting in this rehabilitation episode of care.
Justification:	This item is required to be able to define cohorts to ensure appropriate benchmarking
Guide for use:	Collect for AROC impairment code 5 and 16 only.Leave blank for other AROC impairment codes. Use the Rockwood Clinical Frailty Scale to record the patient's level of frailty prior to their injury or exacerbation of impairment.

Codeset Values:

1	Very Fit: Robust, active, energetic, well motivated and fit; these people commonly exercise regularly and are in the most fit group for their age
2	Well: Without active disease, but less fit than people in category 1
3	Well, with treated comorbid disease: Disease symptoms are well controlled compared with those in category 4
4	Apparently vulnerable: Although not frankly dependent, these people commonly complain of being "slowed up" or have diseased symptoms
5	Mildly Frail: With limited dependence on others for instrumental activities of daily living
6	Moderately Frail: Help is needed with both instrumental and non-instrumental activities of daily living
7	Severely Frail: Completely dependent on others for activities of daily living
8	Terminally ill
9	Unknown or N/A
